Seeds and Plants

Poultry Supplies and Fertilizers

Monthly Calendar for Florida.

IN JANUARY, plant Irish potatoes, peas, beets, turnips, cabbage and all hardy or semi-hardy vegetables; make hot-beds for pushing the more tender plants, such as melons, tomatoes, okra, egg-plants, etc.; set out fruit and other trees and shrubbery. Sow tobacco.

FEBRUARY—Keep planting for a succession, same as in January, in addition, plant vines of all kinds, shrubbery, and fruit trees of all kinds, especially of the citrus family, snap beans, corn; bed sweet potatoes for draws and slips. Oats may also be still sown, as they are in previous months.

MARCH—Corn, oats and planting of February may be continued; transplant tomatoes, egg-plants, melons, beans, and vines of all kinds; mulberries and blackberries are now ripening.

APRIL—Plant as in March, except Irish potatoes, kohl-rabi, turnips, continue to transplant tomatoes, okra, egg-plants; sow millet, corn, cow peas for fodder; plant the butter-bean and peas; dig Irish potatoes; onions, beets, and usual early vegetables should be plenty for table.

MAY—Plant sweet potato draws in field; continue planting corn for table; snapbeans, peas and cucumbers ought to be well forward for use; continue planting okra, egg-plants, pepper, and butter beans, and tobacco for second crop.

JUNE—The heavy planting of sweet potatoes and cowpeas is now in order; Irish potatoes, tomatoes, and a great variety of table vegetables are now ready; as also plums, early peaches and grapes.

JULY—Sweet potatoes and cowpeas are safe to plant, the rainy season being favorable; grapes, peaches and figs are in full season. Orange trees may be set out if the season is wet.

AUGUST—Finish up planting sweet potatoes and cowpeas; sow cabbage, cauliflower, turnips for fall planting; plant kohl-rabi and rutabagas; last of month plant a few Irish potatoes and beans.

SEPTEMBER—Now is the time to commence for the true winter garden, the garden which is commenced in the North in April and May. Plant the whole range of vegetables except sweet potatoes; set out asparagus, onion sets and strawberry plants and celery.

OCTOBER—Plant same as last month; put in garden peas; set out cabbage plants; dig sweet potatoes; sow oats, rye, celery, etc.

NOVEMBER—A good month for garden; continue to plant and transplant, same as for October; sow oats, barley and rye for winter pasturage or crops; dig sweet potatoes; house or bank them; make sugar and syrup.

DECEMBER—Clear up generally; fence, ditch, manure and sow and plant hardy vegetables and tobacco; set out orange trees and shrubbery; keep a sharp lookout for an occasional frost; a light protection will prevent injury.

TO OUR FRIENDS AND CUSTOMERS

We take this opportunity of thanking our many friends and customers for the liberal patronage accorded us in the past, and to request a continuance of same.

Should we not be able to fill your order within 24 hours after receipt of same, we will write you to that effect. In case you do not hear from us within a reasonable length of time after sending an order, write us, giving full particulars.

If we make a mistake in filling any part of your order kindly give us a chance to correct it. We try to fill all orders correctly, but errors occur in all business houses. So always write us if everything is not exactly what you ordered. We deal squarely with you, just as we would like to be dealt with if we were buying from you. When the goods reach you, if they are not in every respect satisfactory, or if you have any complaint to make regarding them, write to us at once, and we will do our best to satisfy you. If you have any complaint to make concerning an order, be sure to give its number if you know it. If you cannot do this, then give all particulars you can, and be sure that the complaint is signed with the same name and initials as were attached to the order. We do not believe in substitution. We believe in sending you just exactly what you ask for or else sending you nothing. However, if in some cases we are out of some item you order, but have in stock a better article of the same kind, then we would take the liberty of sending you the better article, of course charging you only the price of the article you ordered. But even when we substitute in this way we admit that we are presuming, and so if you are not pleased just return the substituted article to us and we will promptly refund your money.

We again thank you and wish you a happy and prosperous New Year.

Very truly yours,

Tampa, Fla.

Did you ever realize the necessity of planting seeds especially adapted to the soil and climate in which they are to be planted? We make the seed business a study and sell only such seeds as are suitable for our Southern climate. Our seeds are being planted all over the State of Florida, and the results have been highly satisfactory. We can furnish testimonials from hundreds of vegetable growers who have planted our seeds and testify as to their adaptability to our climate and as to final results. Bear us in mind before placing your orders with seedsmen who do not select seeds suitable to our climate. Your interests are ours; we want to furnish you seeds on their merits, and ask you to give us your orders, not because we are home people, but because we will give you the best seeds at as low prices as any other seedsmen in the country.

Table to Assist Farmers and Gardeners in Making an Accurate Estimate of the Amount of Land in Different Fields Under Cultivation.

Weight of Different Manures to Apply to Different Crops per Acre.

Potatoes	Stable 15 to 30 tons
Mangel Wurzel	Stable 20 to 30 tons
Carrots	Stable 12 to 20 tons
Beans	Stable 12 to 20 tons
Onions	Stable 25 to 40 tons
Nitrate of Soda and Potash	250 lbs.
Salt	250 to 500 lbs.
Soot	1,000 to 1,500 lbs.
Concentrated Fertilizers for garden or field cultures.....	1,000 to 2,000 lbs.

Maturity Table.

Beans, table use	40 to 50 days
Beets, table use	50 to 70 days
Cabbage, for early cutting..	70 to 80 days
Cabbage, for late cutting..	100 to 120 days
Carrots, table use	60 to 70 days
Celery, table use	120 to 140 days
Sweet Corn, table use	65 to 80 days
Cucumbers, table use	45 to 60 days
Lettuce, table use	40 to 50 days
Melons, table use	65 to 90 days
Onions, for storage	80 to 120 days
Peas, for table use	50 to 70 days
Radishes, for table use	25 to 45 days
Tomatoes, table use	90 to 100 days
Turnips, for storage	65 to 100 days

WRITE TO US FOR INCUBATOR AND BROODER CATALOGUE

Crenshaw Brothers Seed Co.

TAMPA, FLORIDA

Garden, Field and Flower Seeds

ARTICHOKES

Culture.—The seed of Green Globe can be sown in March or April in rows 15 in. apart and about 1 in. deep; thin to 4 in. and transplant following spring to rows 3 ft. apart, 2 ft. between the plants. Jerusalem Artichokes are planted and cultivated same as potatoes. They are grown principally for hog and cattle feed. See page 29.

Green Globe.—This variety is not grown for its tubers. The part eaten is the undeveloped flower-head which is cooked like asparagus. It is very popular in Louisiana. Oz. 35c.; $\frac{1}{4}$ lb. \$1.25; $\frac{1}{2}$ lb. \$2.25; 1 lb. \$4.00.

ASPARAGUS

Culture.—Asparagus will succeed well in any rich soil, but a light warm soil which has been previously heavily manured for other crops is best. For this section the sowing of seed is preferable. Roots are generally grown North and shipped to Florida. We find that roots one year old grown in this State are equally as strong as 2 or 3-year-old Northern roots. Plant the seed in early spring. Soak over night in water. Plant in hills 1 ft. apart and 2 ft. between the rows, or 3 ft. if to be cultivated with a plow. Put from four to five seeds in each hill; when well up, thin out to two plants.

The following winter, when stalks are cut off, cover with a heavy coat of well-rotted manure and a sprinkling of salt. Fish brine will answer the same purpose. In the spring fork in manure between the rows and keep clean of weeds. The same treatment should be repeated every year. The bed should not be cut until three years old. Care must be taken not to cut the stalks too soon in the fall of the year—not until we have had a frost. If cut before this time it will cause the roots to throw up young shoots, which will weaken them.

Columbia White Mammoth.—A new and entirely distinct variety which has been tried and found to do well in the South. It is more robust and vigorous growing than either Conover's Colossal or Palmetto, producing stronger sprouts than any other variety. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 30c; $\frac{1}{2}$ lb. 50c; 1 lb. 75c.

Giant Argenteuli.—This variety is a selection from imported French stock, but is considered by experienced growers to be very superior, both as to earliness and productiveness. The stalks produced are much larger and will bring better prices in market. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 35c; $\frac{1}{2}$ lb. 60c; 1 lb. 85c.

Palmetto.—A great favorite with Coast truckers. Very early and makes larger stalks than Conover's Colossal. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 30c; $\frac{1}{2}$ lb. 50c; 1 lb. 75c.

Raffia.—Used by growers in tying up and bunching vegetables; 20c. per lb. In 5-lb. lots at 18c. per lb.

Palmetto Asparagus.

In compiling this Catalogue, we have endeavored to make prices that will hold good during the entire season. In some cases, however, this is impossible, and we therefore reserve the right to change any of the prices named herein without notice.

SNAP BEANS

Culture.—Place in rows 18 in. apart, dropping a bean every 2 or 3 in. Plant from end of December, and for succession every two weeks until May. Beans planted in this latitude during June and July will not produce much. August and September are good months in which to plant again. Do not cover the seed more than two inches. It requires one quart to plant 100 ft. of drill; one and one-half bushels to plant an acre. Fall crops planted during August and September should be shaded from the mid-day sun until well rooted.

GREEN PODDED BUSH.

Hopkins Improved Valentine.—A hardy, vigorous plant, upright in growth, holding the pods well up from the ground. Remarkably uniform in height as well as ripening, making it one of the most desirable sorts for market gardeners. Pods are round, thick, meaty, tender and of fine flavor. Fully as early as any strain of Valentine listed, with almost an entire absence of flat pods. Seeds, medium size, deep crimson, with markings of lighter shade. Price—Pkt. 5c; qt. 30c; pk. \$1.75; bu. \$6.00.

Extra Early Refugee.—Resembles Refugee in looks, but more dwarf and compact in growth, and much earlier, in fact, nearly as early as Six Weeks. Pods are round, solid, tender, and of excellent quality. Very prolific and a good shipper. Price—Pkt. 5c; qt. 25c; pk. \$1.50; bu. \$5.00.

Giant Stringless Green Pod.—A robust and vigorous grower, very productive, bearing a great quantity of long, meaty pods of large size and fair quality. A very popular sort in the South, in some sections even taking the place of Valentine. Seed, yellowish brown in color, and of medium size. Price—Pkt. 5c; qt. 25c; pk. \$1.50; bu. \$5.00.

Hopkins Improved Valentine.

Longfellow.—One of the most valuable of the recent introductions. An early sort of vigorous growth, and very prolific; bearing long pods of round, tender beans, that are free from strings when picked young. Texture and quality of the finest, recommended highly for home use. Price—Pkt. 5c; qt. 25c; pk. \$1.75; bu. \$5.50.

Black Valentine.—A recent introduction of great merit. Of true bush growth, vigorous and hardy. Quality of the best, pods long, round, meaty and tender. An extra early sort that we offer with entire confidence. Price—Pkt. 5c; qt. 25c; pk. \$2.00; bu. \$7.00.

Refugee

old favorite with Florida growers, of true bush growth, bearing a great abundance of long, round, green pods, tender and very desirable both as a market or home sort. Late in maturing, but very prolific. Price—Pkt. 5c; qt. 25c; pk. \$1.50; bu. \$5.00.

WAX PODDED BEANS.

Grenell's Golden Wax.—A great improvement over the old strain, as it is more hardy and less liable to rust or blight, which makes it one of the most desirable of wax sorts. Pods are smaller than the old strain, and not quite so golden in color when young, but its reliability and productiveness makes it an excellent sort for market gardeners. Price—Pkt. 5c; qt. 25c; pk. \$1.75; bu. \$5.50.

Davis Kidney Wax.—Of compact upright growth with pods long, straight, oval, and of waxy white color. Very vigorous habit and fairly productive. When picked young quality is good. Seeds white, kidney shape. Price—Pkt. 5c; qt. 25c; pk. \$1.50; bu. \$5.00.

OUR BEAN SEED ARE OF THE HIGHEST GERMINATING QUALITY.

WAX BEANS—(Continued.)

Wardwell's Kidney Wax.—Of extra large size, handsome appearance, are good quality which make it one of the most popular wax sorts in cultivation. Strong, upright, bush growth, pods long, flat and of beautiful waxy color. A great favorite with the market gardeners of Florida. Under favorable conditions it is an excellent cropper. Price—Pkt. 5c; qt. 25c; pk. \$1.50; bu. \$5.00.

Dwarf Black Wax.—One of the most prolific of early wax sorts, pods are meaty, thick, waxy and of good quality. An excellent home garden sort, but also makes a good shipper. Price—Pkt. 5c; qt. 25c; pk. \$1.50; bu. \$5.00.

Hudson Wax.—The most vigorous of any dwarf wax podded bean yet introduced and the yield of large, handsome pods is enormous. Its dense foliage so completely protects the pods that their color is an unusually clear creamy white. Pods very long, straight or slightly curved, flat but fleshy, quite stringless and of very good quality.

While late in maturing the remarkable vigor of the plant is an effectual safeguard against blight and other bean diseases. Seed long, cylindrical, uniform in shape; color light yellowish brown heavily splashed with dull crimson. Pkt. 10c; pk. 20c; qt. 30c; 4 qts. \$1.00; bu. \$6.00.

Currie's Rust Proof.—This has proven itself to be one of the most reliable and popular of all flat pod wax sorts. It is upright in growth, hardy and productive. We recommend it highly. Price—Pkt. 5c; qt. 25c; pk. \$1.25; bu. \$5.50.

LIMA BEANS

DWARF AND POLE.

Burpee's Bush Lima.—Pods are of same size as large Pole Lima and of same flavor. It is very popular and a much stronger grower than Henderson's Bush Lima. Pkt. 5c; qt. 25c; pk. \$2.00; bu. \$6.50.

Henderson's Bush Lima Bean.—This is a dwarf Butter Bean which requires no poles. It grows from 18 to 24 inches high. It is early and productive. Beans are very sweet and tender. Pkt. 5c; qt. 25c; pk. \$2.00; bu. \$6.50.

Prolific Bush Lima.—A decided improvement over the original Bush Lima. Bush grows much larger and they are more prolific. The beans are larger than those of Henderson's Bush Lima and will average more to the pod. It is very early and hardy. Price—Pkt. 10c; qt. 40c; pk. \$2.00.

Large White Lima (Pole).—A very popular sort that has been successfully grown for years. Pkt. 5c; qt. 25c; pk. \$1.25; bu. \$5.50.

Carolina or Sewee (Pole).—Small Lima, commonly known as the Butter Bean; very prolific and sweet. A popular sort in all the Southern States. Pkt. 5c; qt. 25c; pk. \$1.50; bu. \$5.50.

King of Garden (Pole).—Richest and finest flavor, and estimated to be the best of all pole beans. Pkt. 10c; qt. 35c; pk. \$2.00; bu. \$6.75.

POLE SNAP BEANS

Culture.—One quart to 200 poles, or 3 pints of seed to 100 yards of row, 15 quarts to the acre; maturing for table from 45 to 90 days from germination. Plant as soon as danger from frost is over. Set poles 4 by 4 feet; tie up tendrils as often as necessary. To prevent bean poles from blowing down, unite them by strong cords, or better, dispense with poles and use wire netting; 4 to 6 beans should be planted around each pole, eyes down.

Kentucky Wonder or Old Homestead.—Vine vigorous, climbing well, and very productive. Bears its pods in very large clusters. Blossoms white, pods green, very long, often reaching 9 or 10 inches. Nearly round and very crisp when young. Becomes somewhat irregular as the bean grows older. Dry beans long, oval dun-colored. An early and very prolific sort, and in our opinion, is one of the best Pole Beans grown. Pods very showy, and they make the most excellent snaps. Pkt. 5c; qt. 25c; pk. \$1.75; bu. \$6.50.

White Creaseback.—It is a good grower and exceedingly productive, the long pods being produced all over the vine in clusters of from 4 to 12. The pods are very fleshy and of superb quality. The entire crop is matured extremely early, and if shipped to market, the green beans will keep well, while they always command the highest prices. Pkt. 5c; pt. 25c; pk. \$1.75; bu. \$6.50.

Lazy Wife.—This sort is popular in many localities. The pods are broad, thick, very fleshy and possess a rich, butter flavor when cooked. The beans are white and make a very good dry bean for winter use. May be grown either on poles or on corn. Pkt. 5c; qt. 25c; pk. \$1.50; bu. \$5.50.

Broccoli

Culture.—The same as that given for Cauliflower.

Early Large White French.—The best variety. Heads white, very compact and hard, continuing firm for a long time. A hardy, vigorous, easily grown sort. Pkt. 5c; oz. 30c.

Brussels Sprouts

Produces along the whole length of the stem a number of small sprouts resembling miniature cabbages, 1 or 2 inches in diameter. They are of excellent flavor and should be grown in every garden. Sow in the spring. Cultivate the same as cabbage. One ounce of seed will produce about 1,500 plants.

Perfection.—The best variety known. Price—Pkt., 5c; oz., 15c; ¼ lb., 50c; 1 lb., \$1.50.

Kentucky Wonder or Old Homestead.

We wish to call your attention to our Poultry Supplies of every kind. Look on pages 40 to 49. We are State Agents for the "Mandy Lee" Incubator and Brooder. Write us for descriptive catalogue.

Brussels Sprouts.

BEETS

Culture.—The ground for Beets should be rich and well spaded or plowed. Sow in drills 12 to 18 inches apart; cover the seed from $\frac{1}{2}$ to 1 in. When about a month old thin them out to 4 to 6 in. apart. In this latitude Beets are sown in January to May and from the first of August to December. Some market gardeners sow them every month in the year. Seeds should be soaked 12 hours before planting, as this softens the burr and allows the seed germ to prove itself much quicker.

Long Blood Red.—An old standard variety, used for table and cattle; resists droughts better than any other variety of beets. Color deep red; flesh very sweet. Grows entirely underground—10 or 12 tons can be raised on an acre. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; 1 lb. 50c.

Eclipse Blood Turnip.—It is a dark red color and very tender. This is the principal variety planted for shipping. Our stock is of the best, grown especially for us from dark, selected, smooth roots, and cannot be excelled. Price—Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; 1 lb. 50c.

Dewing's Turnip.—A smooth, red Turnip Beet of excellent quality, one that has proven to be of equal value as a market Beet as well as for home use. Flesh sweet and tender. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; 1 lb. 50c.

Extra Early Egyptian Blood Turnip.—The best variety for forcing and excellent for first early crop out of doors, being very early, with small top, roots dark red, rounded on top and flat bottom with very small tap root; flesh dark red, zoned with lighter shade. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; 1 lb. 50c.

Improved Early Blood Turnip.—A dark red Beet, smooth and of uniform size. It keeps well, thus making it one of the best sorts for main crop. The quality is excellent. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; 1 lb. 50c.

Bastain's Early Blood.—Large, quick growth and of bright red color. An excellent home sort of good quality. Price—Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; 1 lb. 50c.

Edmund's Early Turnip.—Flesh dark red and of first-class quality, medium in size, round and smooth. Price—Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; 1 lb. 50c.

Dewing's Turnip.

CABBAGE

Crenshaw's Florida Drumhead.

splendid early Cabbage, resembling Early Summer, but is slightly earlier, more uniform, has fewer outside leaves and is less liable to split and run to seed. For the past three years we have had this sort tested by some of Florida's largest and most experienced growers. They declare it to be without doubt one of the finest strains of Drumhead Cabbage ever introduced. Well adapted to both shipping and home use. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 60c; 1 lb. \$2.00.

Henderson's Early Summer.—In size, form solidity and earliness this is truly a model. It matures at all seasons. Market gardeners who have planted our strain of this Cabbage say that it is the truest they have ever cultivated. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

Pride of Florida.—In introducing this Cabbage to our trade we have endeavored to supply them with a variety that will give them not only a sure header, but a Cabbage of fine quality. In appearance and habits it resembles Early Summer, but is larger and a few days later in maturing. Give it a trial. We feel sure that you will be pleased with the result. Pkt. 10c; oz. 25c; $\frac{1}{4}$ lb. 75c; $\frac{1}{2}$ lb. \$1.40; 1 lb. \$2.50.

Surehead.—Produces large, round flattened heads of the flat Dutch type, and is remarkable for its certainty to head. It is uniform, very hard, firm and fine in texture, and ordinarily weighs from 10 to 15 pounds each. It is sweet flavored, has few loose leaves, keeps well and is good for shipment; very suitable for market gardeners, also for home use. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

All Seasons.—An Early Drumhead Cabbage equally as good as Early Summer, but yielding heads from a third to half as large again. This Cabbage, when planted in the spring, matures a few days later than Early Summer, but when planted in July and August, it will, on an average, mature just as early. The heads of this variety being large and very thick, make a most excellent sort either for early or fall market. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

All Head.—One of the best second early sorts, quality excellent, heads remarkably solid, deep, flat and very uniform in size. It is of compact growth, having few outside leaves, which permits close planting. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

Succession.

Our Cabbage Seed are grown and selected by one of the best known growers on Long Island, and we are therefore confident that they will prove satisfactory.

CABBAGE—(Continued.)

True Jersey Wakefield.—Without a doubt this is the best extra early Cabbage of conical shape now in cultivation. It fully sustains all that has been said in its favor as a variety suited both for family and market gardening. The heads begin to mature the latter part of June to the first of July and may be cut in succession for several weeks. Our seed is Long Island grown and is a specially selected strain. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 60c; 1 lb. \$2.00.

Charleston or Large Wakefield.—This is a selection of early Jersey Wakefield, originating on the coast of South Carolina, and largely planted in the Southern States for shipping to Northern markets in spring. The heads are of the same form and solidity of the original stock but grow nearly twice as large, reaching full size about ten days later. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 60c; 1 lb. \$2.00.

Early Winningstadt.—A well known and very popular variety, being early in season and close to the Wakefield. Heads are larger, decidedly conical; leaves a bright glossy green; heads solid and hard even in summer. This is a very sure heading sort, valuable not only for early use, but also as a winter Cabbage. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 40c; 1 lb. \$1.50.

Large Early York.—An extra early variety with conical shaped heads; popular in some sections of the country for home use and early market. Heads are small and do not ship well. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 40c; 1 lb. \$1.50.

Early Dwarf Flat Dutch.—Has succeeded wonderfully in this climate on account of its ability to resist heat. It never flaws under the severest sun, and it produces very large heads after the earliest sorts have disappeared. We recommend it highly to our customers. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

Succession.—Intermediate between Early Flat Dutch and Late Flat Dutch. Can be planted in succession and matures excellent heads for shipping. Coast truckers have planted it with satisfaction for years. It is similar to the old Newark Early Flat Dutch, but is quite an improvement over that variety. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

Long Island Second Early.—It is a sure header, making one of the best Cabbages for market gardens. We would advise a trial. On account of its hardiness it will soon take a leading place among the shipping sorts. The heads are of medium size and fine flavor. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

Volga.—In uniformity and solidity of head this excellent new sort surpasses all others. Heads are always perfectly solid, flesh firm, tender and white. For hardiness there is nothing to compare with it; also stands drouth far better than many others. A trial will convince you of its superiority. Price—Pkt. 10c; oz. 25c; $\frac{1}{4}$ lb. 85c; 1 lb. \$2.75.

Premium Late Flat Dutch.—As a variety for winter market this Cabbage has no superior. Heads large, bluish green, round, solid, broad and flat on top, often tinted with reddish brown after being touched with frost. They open white and crisp, are tender and well flavored. It is a fall and winter variety and one of the best keepers. With good cultivation on moist, rich ground 95 per cent of them will head up. Decidedly one of the best varieties for late cultivation in our State. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

FLORIDA DRUMHEAD

Has proven itself to be one of the best headers and surest croppers ever introduced. We have sold it to the largest cabbage growers in Florida with satisfactory results. If you have never tried it, do so now.

**True Jersey Wakefield.****Henderson's Early Summer.**

CORN—Garden

Culture.—Plant in hills 3 or 4 feet apart each way, five or six kernels in the hill; or rows 4 feet apart, scattering seeds thinly in the row. One quart will plant 200 hills; 1 peck one acre.

Stowell's Evergreen.

Adams' Early.

Stowell's Evergreen.—It is hardy and productive, tender and very sugary, remaining longer in condition suitable for boiling than any other variety of Sweet Corn. Our stock has been carefully grown and selected to avoid the tendency to a shorter grain and deterioration in the evergreen character of this best known of all the late sorts. Qt. 35c. Write for prices.

Premo.—The earliest of all Sweet Corn. It is even hardier than Extra Early Adams. We highly recommend it to our customers, and are sure that a trial will prove it to be one of the best Sweet Corns offered. Qt. 25c. Write for prices.

Late Mammoths.—The largest ear of all Sweet Corns; of excellent quality and flavor. Qt. 25c. Write for prices.

Mammoth Evergreen.—This produces very large ears. Some have been known to weigh two to three pounds. Quality much superior to many Corns offered. It is very sweet and luscious. It ripens a little later than the Stowell's and the cobs are larger. The kernels are flatter, but are not horse-tooth shape. Qt. 25c. Write for prices.

Country Gentleman.

Country Gentleman.—This variety is small but very sweet. Kernels are small and very pointed. Quality is of the best and it has rapidly grown in favor since being introduced. The ears are of good size and produce in great abundance, a single stalk often yielding 3 or 4 good ears. Its table qualities are unsurpassed. Qt. 35c. Write for prices.

Adams' Extra Early.—Popular first early sort for first planting. Good size and matures very early. Valuable for market gardener. Qt. 25c. Write for prices.

Adams' Early.—Matures later than the Extra Early, but makes larger ear. Qt. 25c. Write for prices.

We are very particular in selecting our sweet corns, to have them true to name. Our seed stock of sweet corns will be found an improvement over many others, in point of flavor. It is Sweet Corn.

POP CORN

Monarch White Rice.—A fine variety, clear white and very productive. Pops beautifully. Crisp, large and is white as down. Pound 20c.

Golden Beauty.—A variety which for rare beauty, extreme earliness, great productiveness, crispness, sweetness, and depth of grain and smallness of cob cannot be excelled. It pops splendidly and matures 4 months from the time it is planted. Pound 20c.

CELERY

Culture.—Celery requires a moist and fertile soil. If your soil is not fertile you must make it so by heavy applications of well rotted manure or commercial fertilizer. If commercial fertilizer is used it must be of the highest grade. In Florida and on the Gulf Coast sow seed for general crop during August and September. Such seed must not be covered more than $\frac{1}{4}$ of an inch, and bed must be well shaded. As plants come up and get from 4 to 6 inches high they should be sheared (tops cut off) two or three times to make stacky plants. They can be transplanted when 6 in. high into trenches, and as the plants grow keep drawing earth up around them, leaving but a small bunch of leaves exposed, to blanch the stalks for market.

French Golden Self-Blanching.—After trying various kinds of Celery in Florida for market gardeners and truckers, we have found that there is only one variety that they can depend on for sure crop to sell for fancy prices; it is the Golden Self-Blanching. There is no other variety equal to it. We have our stock especially grown for us by one of the most reliable growers in France, so that we are confident our stock of Golden Self-Blanching Celery is pure and reliable. Pkt. 10c; oz. 35c; $\frac{1}{2}$ lb. \$2.75; 1 lb. \$5.00.

White Plume.—An early variety that requires little earthing to blanch. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.60.

French Golden Self-Blanching.

COLLARDS

Improved White Georgia.—Called Cabbage Collards on account of its close bunching growth and light green leaves resembling the Cabbage. Combining the hardiness and reality of the Collard with the whiteness and crispness of the Cabbage. A great improvement over the old Long Green. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; 1 lb. 75c.

Georgia Blue Stem.—The old-fashioned variety; much esteemed, but does not compare with the White Georgia. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; 1 lb. 75c.

CARROTS

Culture.—Select a deep sandy loam, made rich by manuring the previous year; if ground is freshly manured, roots will grow pronged and ill shaped. Sow in drills 18 to 20 in. apart and $\frac{1}{2}$ to 1 in. deep, pressing the earth evenly over the seeds. Seeds should be soaked before plantings.

Danvers.—Very popular on account of its productiveness and adaptability to all classes of soil. Tops of medium size. The deep, orange-colored flesh is sweet, crisp and tender. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; 1 lb. 75c.

Improved Long Orange.—An improvement over the old Long Orange in that the roots, while weighing fully as much, are shorter and deeper colored. Very sweet, crisp and tender. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; 1 lb. 75c.

Half Long.—An intermediate sort with deep orange colored flesh, very sweet and tender; one of the best in cultivation. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; 1 lb. 75c.

Large White Belgian.—Grows one-third out of the ground. Roots pure white; green above the ground, with small tops. In light, rich ground grows to a large size. Flesh rather coarse. Used principally for stock-feed. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; 1 lb. 50c.

Danvers.

CAULIFLOWER

Culture.—Sow from July to October in the beds not too rich; in fact, it is much better to make seed bed of the same earth to which plants are to be moved. Do not allow plants to attain more than two leaves before removing to a box, setting plants about 1 inch apart each way. While there they must be well watered. When they are large enough to transplant to field, be careful to water plants as they are set; then cultivate same as cabbage. Cauliflower requires much more cultivation and closer attention. We will be pleased to furnish information regarding this crop at any time. Bulletin mailed upon request.

Early Snowball.—Without doubt the best variety for market gardeners. It is adapted for either forcing or field growing. It will, when properly treated, make large, solid heads. Our strain of this is beyond doubt one of the finest on the market. Pkt. 15c; oz. \$2.00; 1 lb. \$25.00.

Early Favorite.—While not quite so early as the Snowball, it is an exceedingly hardy and easily grown sort, and by far the best for inexperienced growers, as it will head under conditions in which many sorts will fail. The plants are large and form solid, crisp heads, very tender and of fine quality. It is also a good keeper. Several years' experience with this variety has convinced us that it is one of the hardiest in cultivation. Pkt. 15c; oz. \$1.25; ¼ lb. \$3.00; 1 lb. \$10.00.

CUCUMBER SEED

Culture.—For early use, plant as soon as the ground is warm; for pickles, a month later. Form hills 6 feet apart by digging holes 18 in. square and 1 ft. deep, and filling them nearly level with the surface with well rotted manure, or better still, with very rich earth. Mix this with the soil beneath, then draw back the top soil, forming a broad flat hill, 4 to 6 in. above the surface. In this plant 15 or 20 seeds, covering them 1 in. deep. When the plants commence to run, thin to 3 in a hill. Remove all the fruit before it commences to ripen in order to keep the plants in bearing.

Improved Extra Early

White Spine.—This variety is one of the most productive ever offered. It produces Cucumbers of the finest form and most salable size for shipping purposes. It is of a dark green color and a favorite with large truckers and gardeners. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; 1 lb. 75c.

Improved Long Green.

The standard all-around variety. It makes an excellent fruit for slicing. Quality crisp and delicious. The smaller fruit used for packing and the larger ones are often allowed to ripen for preserving. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; 1 lb. 75c.

Arlington White Spine.

An excellent sort, much used for forcing; also good for open ground. Very early and of fine quality. In some trucking sections no other variety is used. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; 1 lb. 75c.

Emerald.—One of the earliest to mature; of excellent quality; perfectly smooth; one of the best varieties for shipping. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 40c; 1 lb. \$1.50.

Improved Extra Early White Spine.

Evergreen White Spine.—This variety of Cucumber will be found to produce less culls and more perfect shape fruit than most any other sort now on the market. Color is a dark green. It is very crisp and tender. An excellent Cucumber for shipping. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; 1 lb. 75c.

Early Fortune.—Full blooded and extremely early; wonderfully productive; a model in shape; of the most inviting and attractive deep green color. Pkts. 5c; oz. 15c; $\frac{1}{4}$ lb. 30c; 1 lb. \$1.00.

CRESS

Curled or Pepper Grass.—This small salad is much used with lettuce, to the flavor of which its warm, pungent taste makes a very agreeable addition. The seed should be sown in drills about 16 in. apart, on very rich ground, and the plants well cultivated. Repeated sowing is necessary to secure a succession. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; 1 lb. 50c.

True Water Cress.—This is quite distinct from the former, and only thrives when its roots and stems are submerged in water. It is one of the most delicious of small salads and should be planted wherever a suitable place is found. The seed should be sown lightly covered in gravelly muck lands along the borders of a small, rapid stream. The plants will need no subsequent culture, as under favorable conditions they increase very rapidly by self-grown seeds and extension of roots. Pkt. 5c; oz. 30c; $\frac{1}{4}$ lb. \$1.00.

Improved Long Green.

Curled or Pepper Grass.

EGGPLANT

Culture.—Seeds should be sown in well shaded beds. Transplant once before setting in open ground. In open ground plants should be 3 ft. apart each way. Cultivate often, keeping plants free from weeds and grass. Care should be taken not to allow insects to remain on plants.

New York Improved Purple.—We have the best strain of large purple Egg Plant that has been introduced. Our growers use special care in their production. Our seed is pure and the plants are thornless. Plants grow large, strong and vigorous. Specimens of "streaked" fruit are few and far between in crops grown from our seed of this variety. It is earlier than many other varieties and will give you satisfaction. Pkt. 5c.; oz. 25c; ¼ lb. \$1.20; 1 lb. \$3.00.

Florida High Bush.—A beautiful, rich purple color; oblong in shape; more productive than the New York Purple; will stand more heat than any other variety. Bushes stand high up, holding the fruit well off the ground, thereby preserving the fruit better than other sorts during rainy weather, also diminishing the number of blighted fruit to a great extent. Write for prices. Pkt. 10c; oz. 35c; ¼ lb. \$1.25; ½ lb. \$2.00; 1 lb. \$4.00.

Black Beauty Egg Plant.—The fruit of this Egg Plant is ready for market fully ten days earlier than other varieties. The skin is a rich purplish black, making a very attractive fruit. Truckers will not make a mistake by planting Black Beauty as a main crop. Our stock has been grown especially for the critical market gardeners of Florida. Pkt. 10c; oz. 35c; ¼ lb. \$1.25; ½ lb. \$2.50; 1 lb. \$4.00.

ENDIVE

A refreshing vegetable closely allied to lettuce. Sow in August and September for winter use in the lower South in drills 18 in. apart. When plants get well up, thin to 12 in. apart. When nearly grown tie up the outer leaves to blanch the heart. In dry weather give plenty of water.

Green Culry.—Hardest and best variety for general use; deep green leaves are beautifully cut and curled. Easily blanched and becomes very crisp, tender, and has fine flavor. Pkt. 5c; oz. 15c; ¼ lb. 50c; 1 lb. \$1.50.

White Curled.—A new variety. Pkt. 5c; oz. 15c; ¼ lb. 50c; 1 lb. \$1.50.

Black Beauty Egg Plant.

GOURDS

Japanese Nest Egg Gourd.—This is a small white-fruited sort, the fruit resembling exactly in form and size the egg of a hen. When properly dried these fruits are light and durable; as they do not crack and are uninjured by cold and wet, they make the best of nest eggs. Grown on a trellis, the vines serve as an ornamental screen.

They should not be planted in very rich soil, as fruits will grow too large for a nest egg. They are desirable also for stocking darners. Pkt. 10c.; oz. 20c; ¼ lb. 75c; 1 lb. \$2.25.

Dipper Gourd.—Very valuable for making dippers; grows on fences and trellises. Train the fruit to hang down. In this way handles will be straight. Pkt. 10c; oz. 20c; ¼ lb. 75c; 1 lb. \$2.25.

Sugar Trough.—Grows to a very large size; holds from 4 to 10 gallons each; used for a great variety of purposes, such as buckets, baskets, soap and salt dishes, nest boxes, and for packing lard. Pkt. 10c; oz. 20c; ¼ lb. 75c; 1 lb. \$2.25.

KALE

Culture.—Sow in seed bed about the middle of spring, and when of suitable size, transplant from 20 to 30 inches each way and cultivate like cabbage. The crown or center of the plant is the part used, and when boiled is sweet, tender and delicate. Kale is improved rather than injured when exposed to frost.

Dwarf Green Scotch Curled.—The variety in most general use; stands the winter without protection. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; 1 lb. 75c.

Emerald Isle.—This new sort makes a very desirable and much more attractive vegetable than the Siberian or Blue Kale. The color is a perfect green, and leaves well crimped; stands the winter well, and no doubt will take the place of the old sorts. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 35c; 1 lb. \$1.00.

KOHL RABI

Culture.—Cultivate the same as Ruta Baga for general, and like Turnips for early crop. They should be used before they attain their full growth.

Mammoth American Flag.

Early White Vienna.—Very early, small, handsome, white bulb; best early variety for table. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 65c; 1 lb. \$2.00.

If you are interested in Poultry, look at our list of supplies, the largest in the State.

Early White Vienna.

LEEK

Culture.—Sow in spring or early fall in drills 6 in. apart; thin to 2 in. When 6 or 8 in. high, transplant in rows 12 in. apart. Put as deep as you can without covering the center leaves. One oz. of seed to 100 feet of drill.

Mammoth American Flag.—A popular sort. Very hardy. Considered by experienced growers to be the best of all varieties on the market. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.60.

PARSLEY

Culture.—Sow at any time from August to April in drills 15 in. apart. It requires 3 to 6 weeks for Parsley to germinate. Soak the seed 12 hours before planting.

Moss Curled Parsley.—An excellent free-growing sort, with pale green leaves of handsome appearance. Used exclusively for garnishing and table decorations. The best for market and private gardens. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 40c; 1 lb. 75c.

Moss Curled Parsley.

PARSNIP

Improved Sugar.—One of the best and hand-somest to be found. Broad shoulder and hollow crown; producing by far the best Parsnip known. \$1.00.

Sugar or Hollow Crown.—A popular variety; very sweet and tender. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 40c; 1 lb. 75c.

Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 35c; $\frac{1}{2}$ lb. 50c; 1 lb.

Crenshaw's Market.

tender, making it one of the best for either market garden or home use. Pkt. 10c; oz. 15c; $\frac{1}{4}$ lb. 40c; 1 lb. \$1.25.

Hanson.—Plant large, forming a flat head resembling that of a cabbage, and so slow to throw up a seed stalk that it often fails to form any seed. Outer leaves light green, with prominent light-colored veins; inner leaves white and usually curved and twisted at the base; very tender and sweet. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 30c; 1 lb. \$1.00.

Big Boston.—A very popular variety with those gardeners who want a large heading, forcing sort. The plants are large, very hardy and vigorous, with broad, comparatively smooth, thin and very hard leaves, which are bright, light green in color, and, when well grown, are quite tender. This is grown in the South as winter lettuce. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 30c; 1 lb. \$1.00.

Trianon Cos, or Celery Lettuce.—A distinct variety of excellent quality. Heads are somewhat conical in shape and, if tied up shortly before cutting it will blanch nicely, forming solid heads. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 45c; 1 lb. \$1.25.

California Cream Butter.—This variety, commonly known as the Royal Summer Cabbage Lettuce, attains a large, strong growth in a comparatively short time, and forms a very solid head of rich, creamy yellow leaves. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 30c; 1 lb. \$1.00.

Trianon Cos, or Celery Lettuce.

LETTUCE

Culture.—If you are prepared with hotbeds, lettuce can be grown at almost any season of the year by selecting the forcing sorts, that will form heads under glass. The quickest way to get a start is plant seeds in a bed of rich earth and when plants grow or select the strongest and most healthy for transplanting into rows 2 ft. apart and about 6 inches in the drills, cultivate same as cabbage. The soil should be rich and its growth pushed in order to produce crisp, tender heads. It should not be sown thickly in a bed and allowed to grow up spindling and tough, go to seed early and finally die out. One ounce will produce about 2,000 plants.

Crenshaw's Market.—A hardy outdoor sort, that is becoming very popular among Florida growers. Heads are large and firm; leaves crisp and

Hanson.

Large Drumhead or Victoria.—Heads remarkably large and compact, crisp and tender. One of the finest summer varieties. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 30c; 1 lb. \$1.00.

Boston Market.—One of the earliest to head. A splendid sort for home use. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 30c; 1 lb. \$1.00.

White Seeded Tennisball.—A quick grower of fine flavor; very crisp and tender; heads large and firm. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 30c; 1 lb. \$1.00.

**We Handle
MAINE GROWN SEED POTATOES
Pure Stock**

MELONS

MUSKMELONS AND CANTELOUPES.

Culture.—It requires good sandy soil, well manured, to mature first-class Muskmelons. Plant when danger of frost is past, in hills 5 to 6 feet apart. Put 8 to 10 seeds in each hill; thin out to 3 or 4.

Crenshaw's Mammoth Perfection Muskmelon. In this melon we are convinced that we have indeed a perfect Muskmelon. In shape it is nearly round, as thick at the bottom end as at the side. It's color is dark green until it commences to ripen; it then turns yellow. At first sight of turning it is time to pick. Growers who expect to ship, or even market them at home, should not wait until it is full ripe. If picked two or three days ahead, it will then reach the consumer at the right time. It is a handsome melon, slightly netted, firm flesh and with small seed cavity. It is a quick grower and a heavy yielder. Fruit will average 8 to 15 lbs., with good season and proper cultivation. Our customers should give it a trial. Pkt. 10c; oz. 20c; $\frac{1}{4}$ lb. 60c; $\frac{1}{2}$ lb. \$1.00; 1 lb. \$2.00.

Extra Early Hackensack.—A strain of small green nutmeg in which the ribs are more pronounced and netting closer. Flesh coarse, but very thick and sweet. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 50c; 1 lb. 75c.

Banana.—An entirely distinct variety, bearing long, slender, banana-like fruit; skin creamy white and entirely free from netting. Flesh deep salmon color, thick and of good quality. It often grows to be two feet or more in length. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 35c; $\frac{1}{2}$ lb. 60c; 1 lb. \$1.00.

Netted Gem.—Early; good quality; very attractive. Flesh very sweet. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 50c; 1 lb. 75c.

New Orleans Market.—A large species of the citron kind. It is extensively grown for the Southern market; large in size; very rough netted and of delicious flavor. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 50c; 1 lb. 75c.

Early Nutmeg.—A popular variety for early market as it is extremely hard and fruit ripens quite early. Fruit well ribbed and heavily netted. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 50c; 1 lb. 75c.

Rocky Ford.—This is a small, oblong Canteloupe, green flesh, and has the most delicious flavor, surpassing all other sorts. For several years past this variety has gained a great reputation in the Northern and Western markets, selling at a much higher price than any other varieties offered; in fact, often selling for nearly twice as much as other sorts. This great popularity as a shipping and market melon has created a heavy demand for these seed. We offer the best and purest stock, direct from Rocky Ford, Colo. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 50c; 1 lb. 75c.

Large Hackensack or Turk's Cap.—A large, second early sort, very popular in some sections; flesh thick and very sweet. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 50c; 1 lb. 75c.

Paul Rose or Petosky.—Of medium size, flesh salmon and very thick, quality excellent; very solid, a fine shipper as well as home sort. Price: Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 25c; 1 lb. 75c.

Mammoth Perfection Muskmelon.

Extra Early Hackensack.

WATERMELONS

Culture.—Watermelons will grow and produce where Canteloupes will not do well. The soil for this plant must be light and sandy.

Plant in hills about 8 feet apart, 8 to 12 in a hill. When the plants are well up, thin out to 3. The plants should be hoed often, and the ground between the hills kept clean until the vines touch.

Florida Favorite.—This melon originated in Florida. It is an excellent variety, very prolific, earlier than the Kolb Gem, Rattlesnake or Pride of Georgia. Very fine for table.

Florida Favorite.

PURE STRAIN MELON SEED

We offer nothing but the purest Seeds grown by men of long experience in this line. They are not saved from culls

It is not as good a shipper as the Kolb Gem or Rattlesnake. Is of medium size, colored with light and dark green stripes alternately. Flesh deep red, deliciously sweet, firm and crisp. It is without doubt one of the best melons grown. Our stock is of select strain and is especially grown for us. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 40c; 1 lb. 75c.

Kleckley's Sweet.—Vine vigorous and productive; fruit of medium size, oval; color, mottled green in two shades, forming indistinct stripes. Flesh bright red, very sweet and tender. It is without doubt the sweetest of all Watermelons. The rind is very thin and will not stand shipping. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 40c; 1 lb. 75c.

New Triumph.—This melon is a market sort and for shipment is the best produced. It is very prolific, early and of a uniformly large size. It is a cross between the Duke Jones and the Kolb Gem. Has the firm, handsome appearance of the former, and the fine shipping qualities of the latter. The rind, like the Duke Jones, is of dark green color, with distinct stripes of little lighter shade. The seed are exactly the same color of the Kolb Gem. As a table melon it is superior to the Kolb Gem, and of fine flavor. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Improved Georgia Rattlesnake.—One of the finest strains of melon ever introduced. It is quite superior to the old original Rattlesnake melon. Rind green, with dark green stripe. Shape of melon oblong, with butt ends. Our strain does not produce melons with a neck. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 40c; $\frac{1}{2}$ lb. 75c; 1 lb. \$1.25.

Augusta Rattlesnake.—Oblong, large, light green, with darker green stripes. Very popular as a market sort. Before the introduction of the Kolb Gem was the only shipping melon in the South. The improved Georgia Rattlesnake is, however,

Jordan's Gray Monarch.

a much better strain. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Jones.—This is one of the best shipping varieties, and is much preferred to some of the older sorts. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Alabama Sweet.—A large dark-skin melon. Flesh red. It is one of the first to come in the market, it being very early, strong of growth, and will bear longer than most other melons. It is a light-seeded melon, and first-class for shipping. Of good size, though not ungainly. It is quite extensively grown in the State of Texas, where it brings high prices. Pkt. 5c; oz. 10c; ¼ lb. 20c; ½ lb. 30c; 1 lb. 50c.

Glossier.—A good shipper. Large size and a good flavor. A very popular melon. Pkt. 5c; oz. 10c; ¼ lb. 20c; ½ lb. 30c; 1 lb. 50c.

Carolina Bradford.—Without doubt one of the finest home melons grown. Flesh bright red, rind dark green. A good keeper, and seldom spots. To those wishing a first-class market melon, we recommend the Bradford. Pkt. 5c; oz. 10c; ¼ lb. 30c; ½ lb. 50c; 1 lb. 75c.

Jordan's Gray Monarch.—A melon of large size and fine quality. A good shipper as well as home market melon. Flesh deep red; rind gray. Pkt. 5c; oz. 10c; ¼ lb. 30c; ½ lb. 50c; 1 lb. 75c.

Pierson.—We have the only pure Pierson on the market. It is oblong in shape and grows to a large size. Rind is dark with a darker green stripe; of medium thickness, rather tough. It is early and very prolific. Flesh is very red, crisp and deliciously sweet. Seed are creamy white. Its long shape makes it very desirable for all Southern markets. For home use it is excellent. Pkt. 5c; oz. 10c; ¼ lb. 35c; ½ lb. 60c; 1 lb. \$1.00.

Pierson.

The Watson.—We think that this melon has every quality that goes to make up a very desirable variety. The shape is ideal, rind dark, thin and very tough, making a good shipper. Medium early, very vigorous vine and very prolific. Flesh is dark; crisp; no strings, and one of the most delicious tasting sorts in existence. We recommend this melon. Pkt. 5c; oz. 15c; ¼ lb. 35c; 1 lb. \$1.00.

MUSTARD

Culture.—Largely grown in the Southern States, as salad, or boiled with meat for greens. Sow in the fall, winter or spring, in rows 6 in. apart. Sow 1 oz. to 80 feet of drill. The following are the best varieties:

Southern Giant Curled.—Very popular in all sections of the South. Pkt. 5c; oz. 10c; ¼ lb. 25c; ½ lb. 50c; 1 lb. 75c.

Ostrich Plume.—An improvement over the old Southern Curled. Very popular. Leaves large, crisp and tender. Pkt. 5c; oz. 10c; ¼ lb. 25c; ½ lb. 50c; 1 lb. 75c.

Smooth Leaf Mustard.—This is a very valuable addition to our list. Has broad, smooth leaves that are very crisp and tender. Pkt. 5c; oz. 10c; ¼ lb. 35c; ½ lb. 60c; 1 lb. \$1.00.

We can refer you to numbers now in use in Florida. Write today, while you think of it.

ONIONS

Culture.—Sow the seed in beds; cover to the depth of $\frac{1}{2}$ inch and firm the soil over it. Never let the soil get dry. Transplant into rich soil in rows 18 in. apart, 5 in. apart in each row, or in beds 7 feet wide, placing sets crosswise the bed. By so doing you will save 1 ft. of ground in every three.

Louisiana Creole.—The most reliable variety grown in the South. It is good size and of mild flavor. Color red. It is by far the best shipping onion grown in the Southern States.

The keeping qualities of this Onion are unsurpassed and the yield is enormous.

Crystal Wax Bermuda.—Earliest, best flavored of all mild white onions; is one of the varieties that has made south-west Texas famous as an onion growing section. In the Central South where onions do not stand the winter well it is a splendid onion for earliest spring planting, either for a mild onion to pull green or to go to full maturity in June. The Crystal Wax is well adapted to the Central South for early spring planting. Try it this spring. Genuine Seed Supply Limited. Pkt. 10c; $\frac{1}{2}$ oz. 20c; 1 oz. 35c; $\frac{1}{4}$ lb. \$1.00; 1 lb. \$3.75.

White Bermuda Onion.—An imported Onion that has proven more successful for home markets than any other variety in the South; but owing to the fact that it decays quickly we do not advise planting for shipments to distant markets unless you have had experience in keeping same. We import our seed direct from Teneriffe, Canary Islands. Customers should make a note of this. American-grown seed of this Onion will not give satisfaction. The Onion when matured, is a light straw-color and not pure white, as a great many seem to think. We recommend it highly for family use, on account of its mild flavor. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 75c; $\frac{1}{2}$ lb. \$1.50; 1 lb. \$2.75.

True Red Bermuda.—This variety is the same shape, size and flavor of the White, the only difference being the color. It does not mature as early as the White. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 75c; 1 lb. \$2.50.

ONION SETS

We carry in stock at all times during the season a full supply of the varieties named below, and always give a measured bushel unless otherwise quoted. Prices in this catalog are made for measured bushel and not 32 lbs. Write for prices on large quantities. Plant three quarts of sets to 100 yards of row, 8 to 10 bu. to the acre, according to size of sets.

Bermuda Onion Sets.—Grown from seed furnished by ourselves to the grower and imported direct from Teneriffe. For late planting we have a few bushes.

Silver Skin.—These are grown from a choice strain of Silver Skin Onion and, if planted in the fall, will produce fine Onions for early spring; or if allowed to mature, will make a fine crop of large handsome bulbs. Qt. 15c; pk. \$1.00; bu. \$3.50.

Yellow Danvers.—A splendid keeper. Makes large Onions. Very good for seasoning. Quart, 15c; pk. \$1.00; bu. \$3.50.

OKRA

Culture.—Sow the seed thinly in dry, warm soil; in shallow drills two feet apart. Hoe frequently and draw earth to the stems as they continue to grow. Soak over night before planting. Gather the pods when white green and about $1\frac{1}{2}$ inches long.

White Velvet.—This variety is a great improvement on the old White or Green. The plant is of medium height, bearing large crops of smooth, tender pods, which retain their tenderness until nearly full size. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Perkins' Mammoth Long Pod.—The plant of this desirable variety is enormously productive. The pods are long, slender, deep green, and remain tender much longer than most others. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Dwarf Green.—This variety is of dwarf habit, with long green pods. It has been planted by market gardeners for several years and has proven a profitable crop. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; 1 lb. 50c.

Long Pod.

GARDEN PEAS

(If ordered by mail, add to the price named 5c. per $\frac{1}{2}$ pint; 10c. per pint, and 15c. per quart for postage.)

Culture.—Peas succeed best in light, rich, loamy soil, which has been manured the previous season. Plant the smooth varieties in the Spring, as soon as the ground can be worked, in rows 3 or 4 ft. apart, planting seed 2 in. deep, giving the taller varieties more room between the rows. For succession plant every two weeks. The dwarf varieties can be planted in rows $2\frac{1}{2}$ to 3 ft. apart. Peas grown as a market crop are rarely ever staked, but when the taller varieties are grown for private use, a good plan is to sow them in double rows and stake with brush. They should be kept clean and the earth worked towards them two or three times during the growth. $1\frac{1}{2}$ bu. are required to plant an acre: 1 qt. to plant 100 ft. of drill.

Early Alaska Peas.—The best Early Pea. Seed of bluish color, well rounded and filled out and of the finest flavor. Very prolific for an extra early variety. Pkt. 5c; pt. 15c; qt. 25c; pk. \$1.50; bu. \$5.00.

Crenshaw's Excelsior.

First and Best.—This is one of the best first and early sorts. Very productive and free from runners. It grows from 2 to 3 ft. high, and will mature for table use about 45 days from germination, frequently in less time. It takes but two pickings to strip the vine. A good pea for market gardeners. Pkt. 5c; pt. 15c; qt. 25c; pk. \$1.50; bu. \$5.00.

Crenshaw's Excelsior.—An extra early, smooth Pea, with fine qualities. A rapid grower, quick to mature, and a good shipper. Market gardeners will find it to their advantage to plant this Pea. Pkt. 5c; pt. 15c; qt. 25c; pk. \$1.75; bu. \$6.00.

Morning Star.—One of the standards among Florida truckers. Early and very productive. Pkt. 5c; pt. 15c; qt. 25c; pk. \$1.50; bu. \$5.00.

American Wonder.—The first variety of dwarf compact growth and early maturity, having a wrinkled seed and rich, sweet flavor. While a number of improved varieties have been introduced since, this still remains a leading favorite for home and market. The vines grow only 8 to 10 inches high, and pods mature in quick succession to the Extra Early. Pkt. 5c; pt. 15c; qt. 25c; pk. \$1.75; bu. \$6.00.

Nott's Excelsior.—This variety is midway in character of vine and pod between the American Wonder and McLean's Little Gem, and combines the good qualities of each. One of the very best for the family garden. Pkt. 5c; pt. 15c; qt. 25c; pk. \$1.75; bu. \$6.00.

Black Eye Marrow Fat.—Grows about 5 ft. high. Pods are large and full. A prolific bearer and one of the very best Marrowfat sorts. Pkt. 5c. pt. 10c. qt. 20c; pk. \$1.25; bu. \$4.00.

American Wonder.

McLean's Little Gem.

Bliss' Everbearing.—A stout vine; yields immense number of short pods, which are filled with peas of the largest size. They cook quickly, having a fine flavor, and are very sweet. Pkt. 5c; pt. 15c; qt. 25c; pk. \$1.50; bu. \$5.00.

Yorkshire Hero.—An excellent, tall-growing variety; quite a favorite in some sections of the country; fills its pods well with large sweet peas. Pkt. 5c; pt. 15c; qt. 25c; pk. \$1.50; bu. \$5.00.

Gradus or Prosperity.—The greatest improvement in wrinkled peas that has been offered in years. An extra sort of unequaled quality. Vines grow about two feet and stand up well; do not require staking. The peas are tender and sweet. Pkt. 5c; pt. 15c; qt. 25c; pk. \$1.75; bu. \$6.00.

McLean's Little Gem.—A dwarf wrinkled variety. It is early, very prolific, and of excellent flavor; requires no sticks. Pkt. 5c; pt. 15c; qt. 25c; pk. \$1.50; bu. \$5.00.

Large White Marrowfat.—About 5 ft. high; of strong growth. Pods large, round and well filled. Seed large and excellent for summer use. Undoubtedly one of the most productive of garden varieties. Pkt. 5c; pt. 10c; qt. 20c; pk. \$1.25; bu. \$4.00.

Crenshaw's Favorite.—This is without doubt the heaviest yielding garden pea of them all, and one that will stand drought better than all others. It is a quick grower, and, if planted thick, does not require sticking. Price—Pkt. 5c; pt. 25c; qt. 50c; pk. \$2.50.

EDIBLE PODDED PEAS.

Mammoth Luscious Pea.—No edible Podded Pea we have ever grown can compare to this when sliced and boiled; served with butter and sauce they make a most tempting and delicious dish. The pods grow 6 to 7 inches long and 1½ inches broad. Once tried this will always have a place in the garden. Pkt. 10c; pt. 20c; qt. 35c; pk. \$2.00; bu. \$7.00.

Gradus or Prosperity.

We Handle Maine Grown
Seed Potatoes
Pure Stock

PEPPERS

Culture.—Cultivate as directed for Eggplant, except that peppers may be transplanted one foot apart in 18 in. drills. Guano, hen dung or other concentrated manure, hoed into the surface soil when the plants are about 6 in. high, will not only be found to increase the produce wonderfully, but will improve the quality of the fruit.

Ruby King (Sweet).—This variety grows to a large size. The fruit is from 5 to 6 in. long by 3 to 4 in. in diameter, and when fully matured is of bright red color. It is remarkably mild and pleasant in flavor, and can be sliced and eaten as a salad. Single plants ripen from 8 to 10 fruits, making this variety both productive and profitable. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

Sweet Mountain (Sweet).—Plants very vigorous and productive. Fruit very large, often 8 in. or more in length by 2 in. in diameter. Very smooth and handsome. When unripe of a bright, deep green color, and when matured, of a rich red. Flesh very sweet, thick, and of mild flavor. It is a late sort. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

Large Sweet Spanish.—A large, sweet variety fine for mangoes. Flesh thick and of mild flavor. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

Large Bell or Bull Nose (hot).—Is a large, oblong variety, which is not sweet or mild, as thought by some people. The seeds are very hot. Used for pickling. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

Long Red Cayenne (very hot).—A rather late variety, having long, slim, pointed pod. Bright red when ripe. Extremely strong and pungent. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 65c; 1 lb. \$2.00.

Tobasco.—This variety is used in the manufacture of Tobasco Sauce. It is very hot, but good for family use. Try it. Pkt. 10c; oz. 40c.

Large Bell or Bull Nose.

PUMPKINS

Note.—They are generally grown in the field, with the exception of the Cashaw, which is planted in the garden. But great care must be taken not to plant them close to squashes, or melons, as they will mix and spoil their quality. Plant in hills 8 to 12 ft. apart.

Connecticut Field.—Large, round, soft shell. Salmon color. Very productive. Best for stock. Oz. 5c; $\frac{1}{4}$ lb. 15c; $\frac{1}{2}$ lb. 25c; 1 lb. 40c.

Large Yellow.—Grows large and is adapted for cooking purposes and feeding stock. They are variable in shape, some being flattened at the end, others round or long. Of deep, yellow color. Fine grain and of excellent flavor. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; 1 lb. 50c.

Ruby King Pepper.

use. There are two kinds—one yellow and the other green, striped with light yellow color. The latter is to be preferred. The flesh is fine grain, yellow, very sweet and better than any winter squash. Pkt. 5c; oz. 10c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

CRENSHAW'S SMALL FLORIDA PUMPKIN

A small, round very sweet Pumpkin; especially adapted to Southern climate. Price—Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; 1 lb. \$1.75.

Cashaw Crook Neck.—This is extensively cultivated in the South for table

Large yellow.

Early Rose.

POTATOES

Note.—We have our seed stock grown especially for us in Aroostook County, Maine. The most successful growers in the State of Florida use Maine-grown seed Potatoes. You will find listed below the varieties we carry in stock. Prices will be quoted on application when season opens.

Culture.—Potatoes thrive and produce best on light, dry, but rich soil. Well decomposed stable manure is best, but if not to be had, cottonseed meal, bone dust, or any other fertilizer should be used to make the ground rich enough. If the ground was planted the fall previous with cow peas, which were plowed under, it will be in good condition for Potatoes. Good size tubers should be selected for planting, which can be cut in pieces not too small, each piece ought to contain at least three eyes. Plant in drills from 2 to 3 ft. apart, according to space and how you intend to cultivate afterwards.

Early Rose.—This variety has for many years been very popular for table use. It is shallow-eyed, pink skin, very dry and mealy when boiled. It has not become so popular as it deserves as a market variety, owing to its color. It should not be planted too soon, from the fact that they have small stalks, and if they are cut down by frost they suffer more than other varieties. They want rich, light soil, to grow to perfection.

Dakota Reds.—Large, long and wedge shaped. Thrives well on either sandy or clay soil. Solid mealy and fine grain. Enormous yields are reported on this variety.

Bliss' Triumph.—One of the best of all early Potatoes. Tubers are medium in size, round and very uniform in size. Eyes slightly depressed and color of a beautiful light red. It has grown rapidly in favor from time of introduction, and has now become one of the standard shipping sorts.

Beauty of Hebron.—We have given this variety a thorough trial, and have found it one of the best for shipping and table purposes. In shape it resembles the Early Rose; is equally as early and of good keeping qualities. It is a white Potato, and mealy when cooked. We recommend this variety for all purposes.

Rose No. 4.—Spalding's Rose No. 4 is a Potato that gave almost universal satisfaction in Florida for several seasons past. We have contracted for an ample supply, and will be pleased to quote prices on application.

WRITE US FOR INCUBATOR AND BROODER CATALOGUE

RADISHES

Culture.—Sow in any good garden soil as soon in the spring as the ground can be worked. Radishes require rich, mellow soil. The early small varieties can be sown broadcast among other crops, such as beets, peas, spinach, etc. Sow every ten days for a succession. In Florida along the Gulf Coast they can be sown all through the winter.

Early Scarlet Turnip-Rooted.—Small top, quick growth, crisp and mild. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

New Crimson Giant.—A new type of early Turnip Radish of a striking deep crimson color, attaining a size of 6 to 7 in. in circumference, weighing over an ounce or about four times the weight of Scarlet Turnip sorts. Notwithstanding its im-

mense size it does not get hollow or pithy, the flesh remaining white, solid, crisp and tender, and of the mildest flavor. Pkt. 10c; oz. 15c; $\frac{1}{4}$ lb. 30c; $\frac{1}{2}$ lb. 50c; 1 lb. \$1.00.

Scarlet Turnip White Tip.—A very popular sort for early use. Quick to mature and seldom becomes pithy. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Large White Summer Turnip.—Root round, smooth, very white and handsome. Flesh crisp, tender, but rather pungent in flavor. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Early Long Scarlet Short Top.—A very popular variety that is brittle and has very short top. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Mixed Radish Seed.—A mixture of several different varieties. Pkt. 15c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Scarlet Turnip White.

SPINACH

Culture.—For summer use, sow in very rich ground, the richer the better, in early spring; drill 1 ft. apart. This sowing must be cut before the approach of hot weather or it will run to

seed. Can also be sown in the fall for spring use. It is not necessary to protect the plant.

Norfolk Savoy.—The earliest and also a very hardy variety. Plant of upright growth, with leaves finely savoyed, like those of cabbage. The best sort of plant for a succession of crops. Pkt. 25c; oz. 10c; $\frac{1}{2}$ lb. 20c; $\frac{1}{2}$ lb. 25c; 1 lb. 40c.

Victoria.—A new sort which forms a very large, exceedingly thick, dark green leaf, some savoyed in the center. It is a little later than the Savoy, but remains much longer, and cannot fail to please. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 25c; 1 lb. 40c.

Norfolk Savoy.

SQUASH

Culture.—Plant in a warm, well pulverized rich soil, mixing a shovel full of well rotted manure with the soil in each hill. Plant 8 or 10 seeds to the hill; the bush varieties 4 to 6 ft. apart, the running sorts 8 to 10. When well grown, thin out, leaving 3 of the strongest plants in each hill. Summer sorts 1 oz. to 40 hills; 4 to 6 lbs. to the acre. Winter sorts, 1 oz. to 10 hills, 4 or 5 lbs. to the acre.

Early White Bush Patty-Pan.

winter Squash, the flesh of which is salmon yellow, unexcelled for sweetness, flavor and fine grain. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 35c; 1 lb. 60c.

Mammoth Sandwich
Island Salsify.

MAMMOTH SANDWICH ISLAND SALSIFY.

The only variety that has been successful in this country. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 35c; $\frac{1}{2}$ lb. 60c; 1 lb. \$1.00.

SAGE

A hardy perennial, possessing some medicinal properties but cultivated principally for use as a condiment, it being used more extensively than any other herb for flavoring and dressing. Sow early in the spring on very rich ground. Cultivate often and thin the plants to sixteen inches apart. Cut the leaves and tender shoots just as the plants are coming into flower, and dry quickly in the shade. The plants will survive the winter, and may be divided. If this is done they will give a second crop superior in quality to the first. It requires 4 to 5 lbs. to plant an acre in drills. Pkt. 10c; oz. 20c; 1 lb. \$2.50.

SUNFLOWER.

Mammoth Russian.—Fine for feeding chicks and parrots. Price—1 lb. 10c; 3 lbs. 25c; if by mail add 10c. per lb. extra for postage. Pk. 75c; bu. \$2.50.

Early White Bush or Patty Pan.—The earliest to mature. Very productive. Of light cream color. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Early Yellow Bush.—Similar to the preceding, but of deep orange color. Often called Patty-Pan also. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Yellow Summer Crook-Neck.—Old, well-known variety. Fruit orange yellow, covered with warty excrescences. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

Hubbard.—This most excellent winter variety is too well known to need an extended description. The uniform good quality of its fine grain and nutty-flavored flesh, and its good keeping qualities, have made it the most popular of all winter sorts. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 40c; $\frac{1}{2}$ lb. 75c; 1 lb. \$1.25.

Giant Summer Crook-Neck.—An excellent variety that is an improvement over the old Yellow Crook-Neck, and is of much larger size. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 35c; 1 lb. 60 cents.

Boston Marrow.—A large, bright orange

Hubbard Squash.

Our Vine Seed

Such as Squash, Cucumbers and Melons are all grown for us by experienced men and Are Especially Selected for Productiveness and Quality.

TOMATOES

New Stone.

Livingston's Beauty.—One of the best for all purposes. The fruits are grown in clusters, are of a glossy, purplish crimson color, large size, early and seldom crack after rain. Pkt. 5c.

Perfection.—An early sort, of bright red color; perfectly smooth; ripens uniformly and bears abundantly. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; $\frac{1}{2}$ lb. 90c; 1 lb. \$1.75.

B. B.—It has every good quality pertaining to the Tomato and is devoid of all faults of other sorts. It is smooth, solid, and one of the handsomest ever grown. It suits gardeners, canners and shippers. It is as solid as an apple, has no core, and the flavor is excellent. Generally weighs more to the bushel than any other sort, which proves its solidity. Has a beautiful red color outside and inside. The fruit is quite large. Used successfully for both early and late planting. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; $\frac{1}{2}$ lb. 90c; 1 lb. \$1.75.

Spark's Earliana.—Beyond a doubt one of the most prolific of all early sorts. Since the time of its introduction it has gained popularity until it has become one of the most universally planted throughout the whole country. It is especially adapted to the soil of Florida, and shippers will find it to their advantage to try it. Pkt. 10c; oz. 20c; $\frac{1}{4}$ lb. 75c; $\frac{1}{2}$ lb. \$1.30; 1 lb. \$2.50.

Red Field Beauty.—One of the most satisfactory Tomatoes grown. It has stood the test of both market and home gardens for years, not only in the Southern States, but in foreign countries also. It is early, of bright red color, and the quality is excellent. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; $\frac{1}{2}$ lb. 90c; 1 lb. \$1.75.

Livingston's Globe.—A new, very large, purple fruited Tomato of excellent quality. Fruits rather uneven in size, but very smooth and mature earlier than most main crop sorts. The average Tomato is very deep, almost globe shaped. Pkt. 5c; oz. 30c; 2 oz. 55c; $\frac{1}{4}$ lb. \$1.00; 1 lb. \$3.00.

Favorite.—A very prolific, solid; of a dark red color, and ripens evenly and early. A good sort for all purposes. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; $\frac{1}{2}$ lb. 90c; 1 lb. \$1.75.

Dwarf Champion.—A dwarf growing variety, stiff and upright, being self-supporting, even when laden with fruit; in fact, it is almost a tree Tomato. Can be grown as near together as 3 ft. It is early and prolific. Purple in color. Pkt. 5c; oz. 20c; $\frac{1}{4}$ lb. 60c; $\frac{1}{2}$ lb. \$1.00; 1 lb. \$2.

Culture.—Sow in hot-bed in early spring, or the seed may be sown in shallow boxes and transplanted in the open ground when all danger of frost is past, setting the plants 3 or 4 feet apart each way. Some support should be provided for the vines to keep the fruit from the ground. Fruit may be had several weeks earlier by sowing seed quite early and transplanting to small pots. When these are filled with roots, shift to a larger, and transplant to open ground when the weather is warm and settled, shading from the sun for a day or two. As the roots are not disturbed by taking plants from the pots, the plants suffer no check, but grow right on.

New Stone.—Of a large size, bright scarlet color and will withstand rot and blight better than most other sorts. It makes most attractive and salable fruit, firm and uniform, and is an excellent shipper. Pkt. 5c; oz. 15c; $\frac{1}{4}$ lb. 50c; $\frac{1}{2}$ lb. 90c; 1 lb. \$1.75.

Spark's Earliana.

TURNIPS AND RUTABAGAS

firm and mild, quite devoid of rank, strong taste. Pkt. 5c; oz. 10c; 1 lb. 50c.

Early Purple Top Strap Leaved.—This is an early variety and a great favorite for table use. It is quite flat; of medium size; color, purple top or dark red above the ground; flesh below ground white; fine grained and tender. Leaves few and upright in growth. Pkt. 5c; oz. 10c; 1/4 lb. 20c; 1/2 lb. 30c; 1 lb. 50c.

Early White Flat Dutch Strap Leaved.—A most excellent early garden variety much used in our State. It is sure to bottom and make a very sweet and tender early sort. Pkt. 5c; oz. 10c; 1/4 lb. 20c; 1/2 lb. 30c; 1 lb. 50c.

Purple Top Milan.—The earliest of all Turnips. Also one of the finest flavored. Pkt. 5c; oz. 10c; 1/4 lb. 25c; 1/2 lb. 40c; 1 lb. 75c.

Purple Top White Globe.—It is globular in shape and nearly as large as the Pomeranian White Globe, of beautiful appearance and the most excellent quality and equally desirable for table or stock. Our strain of this is very superior to the majority now on the market. Pkt. 5c; oz. 10c; 1/4 lb. 20c; 1/2 lb. 30c; 1 lb. 50c.

Seven Top, or Georgia Salad Turnip.—An excellent variety to grow for salad. Roots small, tops large, leaves crisp and tender. Pkt. 5c; oz. 10c; 1/4 lb. 20c; 1/2 lb. 30c; 1 lb. 50c.

Golden Ball.—The sweetest of all yellow fleshed Turnips. An excellent variety. Pkt. 5c; oz. 10c; 1/4 lb. 20c; 1/2 lb. 30c; 1 lb. 50c.

Improved Purple Top Yellow.—The strain of Ruta Baga that we have is without doubt superior to all others. It is hardy and productive, is globular in shape, having very little neck. Flesh yellow, of solid deep purple, above the ground and bright yellow beneath. Sweet and well flavored. Leaves small, light green. We do not hesitate to declare this beyond doubt to be the best strain of Ruta Baga that has ever been sold in the State of Florida. Pkt. 5c; oz. 15c; 1/4 lb. 30c; 1/2 lb. 45c; 1 lb. 75c.

Purple Top Yellow.—The old sort that has been in use for years. Pkt. 5c; oz. 10c; 1/4 lb. 20c; 1/2 lb. 30c; 1 lb. 50c.

Culture.—Sow the early sorts in July or August, and locate during August and September. Sow either broadcast or in drills 2 ft. apart, thinning out to 6 in. and roll the ground after sowing. Ruta Bagas should be sown in August and September and earthed up as they grow. Early turnips may also be sown in the spring. Sow at the rate of 1 1/2 to 2 lbs. to the acre in drills; 2 to 2 1/2 lbs. broadcast. Salad varieties require 3 to 3 1/2 lbs. per acre.

Cow Horn.—Long, white flesh; fine grain, sweet and very popular. Pkt. 5c; oz. 10c; 1/4 lb. 20c; 1/2 lb. 30c; 1 lb. 50c.

White Egg.—A quick growing, egg-shaped, pure white variety, growing half out of the ground, with small top and rough leaves. The flesh is very sweet,

FIELD SEEDS

RICE

Upland Rice.—Very popular in this State and a number of small areas are grown for home use as an auxiliary crop. Should be cultivated on every farm in our Southern country. Several years' experience has demonstrated the fact that rice can be as successfully grown on high lands as elsewhere. Pk. 75c; bu. \$2.50.

Directions for Planting Upland Rice.—On lands that hold moisture well, such as waxy or post oak land, plant anywhere. On dry or sandy land rice is planted in the low places. Prepare the land and cultivate as for corn, except the rows are only 22 to 24 inches apart so that one furrow in each middle, with an 18-inch sweep, usually suffices for a working, and the hills just far enough so it can be hoed. Plant as early in April as you can. Furrows are opened and the seed covered in any way most convenient at the time, just so the seeds get a little dirt over them. Drop 15 or 20 seed in each hill and leave all that come up. Cultivate for moisture and to keep down grass and weeds until rice begins to head. It usually ripens last of August or early in September. The color tells when it is ripe. Peck, 75c; Bushel, \$2.50.

Giant Beggarweed.—One of the most valuable of all forage plants; has been extensively planted and has given entire satisfaction. Its special features are:

First—Restoring worn-out land.

Second—Is an annual, when once established it requires no further attention.

Third—Is easily eradicated when desired.

Fourth—Requires no cultivation.

Fifth—Is relished by all forage grazing stock.

Sixth—Does not interfere with the growth of other crops, and is sown like oats.

Six pounds will plant an acre.

Beggarweed can be sown after a crop of oats is harvested, or it can be scattered between the corn rows after the crop has been laid by; 6 to 10 lbs. of clean seed are enough for an acre. If planted early the seed will lie in the ground and fail to germinate until the ground has become warm, and for this reason growers often denounce seed as being no good. Beggarweed makes an excellent quality of ensilage, either alone or mixed with fodder.

BERMUDA GRASS.

Often planted for lawns. No grass will stand the sun better or will make a prettier carpet when kept short. It is also very valuable as a pasture and hay grass; but we would not advise planting on land that you expect to cultivate in other crops, as it is almost impossible to eradicate it after having once obtained a good hold. We can also supply Bermuda roots if desired, but the sowing of seed is much simpler, and an easier plan; 6 lbs. will sow an acre. Should be planted in the spring, but can be sown later. Under the most favorable circumstances it takes from 60 to 90 days to sprout; requires damp weather and hot sun, but when once up, grows very rapidly. $\frac{1}{4}$ lb. 30c; $\frac{1}{2}$ lb. 50c; 1 lb. \$1.00.

DWARF ESSEX RAPE.

Makes a splendid winter and spring grass. The fattening properties of Rape are said to be even better than that of clover. Can be sown with clover or alone. Plant in September or October, in drills, at the rate of 3 to 5 pounds per acre or broadcast from 8 to 10 pounds. 1 lb. 10c.

HAIRY VETCH.

Should be sown from August to December. Broadcast at the rate of 30 to 40 lbs. to the acre, with about 3 pecks of winter oats. This helps to hold the Vetch off the ground, thus enabling it to make better growth, and much easier to harvest and care for properly. For hay Vetch should be cut just as the oats are heading out. The hay is greatly relished by all kinds of stock. It is very rich and nutritious. It will also furnish excellent winter and spring grazing. If sown early, Vetch, like other leguminous plants, also improves both the conditions and productiveness of the soil where it is grown. We advise the more extensive use of Vetch. 1 lb. 15c; 10 lb. lots and over at 10c.

VELVET BEANS

The popularity of this bean has increased to such an enormous extent that it is now being generally grown throughout the entire South. It makes a larger growth than any other known forage plant in the same length of time, far surpassing the cow pea in yield. The great possibilities of this being a land improver and for producing a good crop of forage seems almost unlimited. It has been thoroughly tested in all of the Southern States, and experienced agri-

culturists pronounce it of the greatest value. The vines and roots are very rich in nitrogen, making it a most valuable soil improving crop. It is often difficult to gather or turn under, owing to its rank growth. It is advisable, when sown thick, to allow stubbles to remain above the ground until frost kills them. It will thus make a heavy coating of vegetable matter which, when turned under will benefit the soil almost equal to a heavy application of stable manure. We are large growers of Velvet Beans and can be depended upon at most any time of the year to supply your wants. Prices fluctuate, however, and if wanted in large quantities, it would be best to write for prices. They may be sown in May or June at the rate of $1\frac{1}{2}$ pks. to the acre in drills 5 feet apart. Write for price.

Velvet Bean.

SORGHUM CANE.

Early Amber.—Furnishes a large yield of most nutritious forage which can be fed either green or cured, and will yield 2 or 3 cuttings a year, stooling out thicker each time it is cut. The saccharine matter is of the finest quality, and it produces a fine sugar or syrup. It grows 10 or 12 feet high. Sow broadcast for forage at the rate of $\frac{3}{4}$ to 1 bu. per acre. When sown in drills, sow at the rate of 10 lbs. $3\frac{1}{2}$ ft. apart. Lb. 10c; pk. 50c; bu. \$2.00.

Early Orange.—A favorite Sorghum in some sections of the South. Does not grow quite as tall as Early Amber, but is heavier. The stalks are longer and the amount of saccharine matter contained makes it more popular as a syrup cane. Lb. 10c; pk. 50c; bu. \$2.00.

KAFFIR CORN.

The great value of this crop has long been appreciated. It makes a large growth of forage and is also particularly valuable on account of its yield as grain, which makes most nutritious feed for stock and poultry. It is non-saccharine and therefore more often used in connection with cow-peas and other forage crops. It has for years been grown in connection with cow-peas at the rate of 1 pk. of Kaffir Corn to 1 bu. of Peas per acre. Sown in this way the Kaffir Corn helps to hold the peas off the ground and this causes a larger growth of pea vine. Both can be cut at the same time and will make an enormous yield of very nutritious food. When sown by itself it requires $\frac{3}{4}$ to 1 bu. per acre. 1 lb. 10c; pk. 50c; bu. \$2.00.

CHUFAS.

In the light gray, sandy soils of our State, unaided by fertilizers, with fair cultivation on land that will not produce from 5 to 10 bu. of corn per acre, Chufas will mature 50 to 100 bu., with but one-half the cultivation that corn requires. They are an excellent hog food. Chickens and turkeys are also especially fond of them, so that a crop, when grown, can be fed both to poultry and hogs. The flesh of the Chufa is especially juicy and delicious. Chufas can be planted from March to July, and a crop made. Plant in 3 ft. rows, 1 to 2 seed 18 in. apart. It requires about 1 pk. per acre. Qt. 20c; pk. \$1.25; bu. \$4.00.

Note.—On account of Chufas dying so fast toward the latter part of the season prices will be advanced after March 1st.

Chufas.

**WRITE FOR INCUBATOR
AND BROODER CATALOGUE**

FIELD CORN

Note.—The varieties of field corn listed below are especially selected for the soils and climate of Florida. The crops are handled by experienced corn growers, under special contract, and seeds are only used from the center of the ear.

Florida Grown White Flint.—This variety gives better results than any other white corn grown in this State. Besides being very early it is prolific, often having three large, full ears to one stalk. Grains are white and hard and it is seldom eaten by weevils. It makes the best meal; is valuable also for stock feed on account of its strength. Pt. 10c; qt. 15c. Write for price.

90-Day Maryland White.—An excellent variety both for field and roasting ears; matures in 90 days and is very prolific. A corn that is largely planted in all the Southern States. Write for price.

Cuban Yellow Flint.—It is said that this corn will make under any circumstances. It never gets too hot or too wet, and dry weather will not hurt it. It has small ears and small grain and is the hardest of all known flint corn. Almost impossible for a weevil to damage it. We import our seed direct from Cuba and of the best stock that can possibly be secured, and recommend it highly to the farmers of Florida on account of its resisting drought so well. Write for price.

Coke's Prolific.—A famous Virginia variety and very popular throughout the South. It is a vigorous grower, tall, abundance of foliage, and will produce two to five ears to the stalk. The grain is white, flinty, rather short, but of good size. The ears are nine to eleven inches long, and fill out well. Write for price.

Virginia White Dent.—This is an early White Dent Corn, often used for ensilage. It is soft grain and can be used as a roasting ear when young. Write for prices.

Improved Golden Dent.—This well known variety has proven very successful indeed in our State and is growing more popular each season. It has large, yellow, flinty grain. Planted mostly for stock feed, but will also make excellent meal. Write for price.

Hickory King.—An early White Corn, with broad, deep grain and very small cob. One of the most popular in our list. An excellent sort for roasting ears. Write for prices.

On account of scarcity of stock, we are unable to quote prices on corn.

Florida White Flint.

GOOBERS

Culture.—Goobers seem to do best on a fairly dry, light, sandy soil. They are pre-eminently the hog feed crop for sand hill on high pine land. Plant in rows $3\frac{1}{2}$ or 4 feet apart and about 10 in. apart in rows at any time from March 1st to June 1st, when the ground is moist enough to plant corn. Cultivate the same as Spanish peanuts, which they much resemble in growth. Turn the hogs in the field when the leaves have turned quite yellow. On new ground drop the goobers into every other furrow as you break the land and they will make a good crop without cultivation. Goobers neevr make "pops" on any kind of soil. The seed we offer was grown on sand hill land in Polk County and is from a crop that yielded 50 measured bu. of seed per acre. Only a limited quantity for sale this season.

MILLET

Pearl or Cat Tail.—Makes a splendid, continuous cutting forage plant for either green feed or hay. It is gaining in popularity throughout the country owing to the fact that it can be cut several times during the season. It grows very rapidly and will attain a height of 12 ft., but we advise cutting several times rather than allowing it to mature. It can be fed either green or cured as dry forage as it makes a most nutritious food which is relished by all kinds of stock. It is largely used by dairymen to furnish their cattle with green feed during the summer. It will continue to grow until killed by freezing weather. Sow 5 lbs. of seed per acre in drills 3 ft. apart or sow broadcast at the rate of 20 to 30 lbs. per acre. 1 lb. 50c; 10 lbs. 10c. per lb. If wanted by mail add 8c. per lb. for postage.

German.—This is decidedly one of the best varieties to grow for a hay crop as it produces a large crop of fine grass ranging in height from $4\frac{1}{2}$ to 6 ft. according to strength of soil. Can be cut green or made into hay and is readily eaten by stock. Its yield is from 1 to $2\frac{1}{2}$ tons to the acre. It requires 1 bu. to sow an acre broadcast. Pk. 60c; bu. \$2.00.

Improved Golden Dent.

FIELD SEED PRICES SUBJECT TO
CHANGE WITHOUT NOTICE.

SEED OATS.

Burt, or 90-Day Florida Grown.—Without doubt this is by long odds the best Oat ever planted in South Florida. This has been proven by the large increase in our sales every season; in fact, it is rather a hard matter for us to secure enough to supply our trade. If in need would advise early orders. Prices fluctuate. Write us for prices and samples. Special quotations made on 100 bu. lots or more. Write for price.

Texas Red Rust Proof Oats.—Our stock of this variety was grown by an experienced farmer in the State of Texas. They are heavy, bright and well cleaned. This has grown to be quite a popular Oat throughout the South, and especially in Florida. For this reason we have endeavored to secure the best stock possible and have gone direct to the home of the Oat for that purpose. They are frequently sown from September to the middle of March. The majority of them, however, are sown from October to February. They are very popular for sowing in low ground or in situations where other Oats are much inclined to rust. They yield an enormous quantity of very heavy grain. Write for price.

Peanuts

Spanish.—This is grown very largely for feeding, the vines making a large yield of excellent and nutritious hay. If the vines and nuts are pulled up and cured together they make one of the richest and most fattening feeds for hogs that can be grown. The nuts are small size, but thin shell and full kernel and are produced in enormous quantity. Pk. 75c; bu. \$2.00.

Common Georgia.—Plant in drills 3 ft. apart, placing nuts 8 to 12 in. apart in drill. Cultivate well and keep clean. It requires 15 to 20 lbs. of shelled nuts, or 1 bu. (25 lbs.) of Peanuts when not shelled, to plant an acre of this variety. They resemble the Spanish Peanut, but are not bunch growth; rather have a tendency to spread, like the Virginia Peanut; therefore are not good for hog feed as the animal finds them rather hard to get at. Can be planted either shelled or unshelled. Pk. 50c; bu. \$1.75.

Spanish Peanuts.

TOBACCO

We import from one of the principal growers of the finest and purest strain of Vuelto de Abajo, which is considered the best of Havana varieties.

Culture.—The seed should be sown as early as possible after danger of frost has passed. A good plan is to burn a quantity of brush and rubbish in the spring on the ground intended for seed bed; then dig and thoroughly pulverize the earth and mix with the ashes, after which the seed may be sown and covered lightly. When the plants are about 6 in. high transplant into rows 4 or 5 feet apart each way and cultivate thoroughly with plow and hoe.

Vuelto de Abajo.—The finest, silkiest and highest flavored Havana Tobacco grown. To produce it to perfection the land must be rich and fresh. It succeeds best on the choicest soils of our State and Texas. Fine crops are also grown in the reclaimed swamps and hammocks throughout the South. Pkt. 10c; oz. 25c; $\frac{1}{4}$ lb. \$1.00; 1 lb. \$3.00.

FIELD PEAS

Note.—Can not price Cow Peas. Will quote on application. Prices fluctuate.

Vine Conch.—For vines this pea has no equal. It will run 20 to 30 ft. then stop. The pea is very small, white and has yellow eye. It is excellent for table use. It bears late and will not mature north of Florida. Plant after danger of frost at the rate of 4 to 6 qts. per acre; put 2 to 3 seed to the hill about 4 ft. apart. If planted late, use 6 to 10 qts. to the acre; it is used more as a fertilizer for groves than any other pea known.

Wonderful, or Unknown.—This makes an enormous growth of vine, but requires the full growing season to make a crop. In yield and growth the vine surpasses many of the varieties of Cow Peas and it yields very largely of the shell peas. This variety should be planted early in order to come to full maturity.

Clay Pea.—A great favorite in some sections. Makes growth of vine similar to that of the Black Pea, but is a little later in maturing. Is prolific both in yield of peas and growth of vine.

Black Cow Pea.—This is a variety grown largely in this immediate section. It is quicker to mature than the Wonderful, and is better adapted for late planting. It is a great land improver, also valuable as a forage crop, yielding an enormous crop of rich, nutritious feed.

Blackeye Peas.—The larger Blackeye Peas are more prolific and bring a higher price than the original Blackeye, and farmers will find it more profitable to plant this variety. They make a profitable crop to grow for picking the dry peas for sale in our market. At the same time it is an excellent soil improver, being similar in action upon the soil to Wonderful and Black Pea.

Whip-poor-will.—A favorite, early, bunch-growing variety. Has brown, speckled seed which are more easily gathered than from the vine-growing sorts. It is quite a favorite on account of its early maturity and habit of growth.

Two-Crop Clay Peas.—A small, yellow pea, planted extensively in Florida; very early. By sowing early in the spring two crops can be raised in one season. It is an excellent pea for table use.

Lady Finger Pea.—A perfectly white, small, round pea with yellow eye; a good runner and is an excellent table variety.

Bush Conch.—The same as the Vine Conch, except that it makes less vine, and, if planted early, will mature two crops in one year. The most delicious table pea.

RYE

Rye and Oat pastures afford excellent range for poultry, thereby increasing the production of eggs as well as improving the health of the fowls. Free use of Rye and Oats by poultry raisers is highly recommended. Prices subject to change. Will quote upon application.

Florida Grown Seed Rye.—For seed purposes there is no Rye except that grown in the extreme South that will answer, as Northern grown Rye will trail on the ground and not stand upright as it should. We have our best Rye grown in the northern part of this State on the best land. We at all times advise the use of Florida Seed Rye. It is better for pasturage than seed grown North. Pk. 80c; bu. \$3.00.

Georgia Grown Seed Rye.—It is sown mostly for pastures. When mixed with Texas Red Rust Proof Seed Oats and sown on rich land, about 1 bu. of Oats and $\frac{1}{2}$ bu. of Rye to the acre, there is no pasture that exceeds or equals it. Dairymen should plant it extensively. This mixture gives the milk a rich, yellow color and is the most valuable green food in all respects that can be grown. Sow for pasture any time from September 15th to March 1st. Pk. 60c; bu. \$2.00.

Dwarf Essex Rape

Makes a splendid winter and spring grass. The fattening properties of Rape are said to be even better than those of clover. Can be sown with clover crop or alone. An excellent green feed for poultry. Plant in drills at the rate of 3 to 5 lbs. per acre or broadcast from 8 to 10 lbs. 1 lb. 10c; 10 lb. lots or more at 8c.

TEOSINTE

The heaviest yielding forage crop grown, 1 acre of Teosinte has been known to yield as much forage as 5 acres of cow peas. Farmers and stock growers should not be without a field of this excellent forage crop. It makes an enormous yield and can be continuously cut. Sow in April, May or June at the rate of 2 lbs. per acre in drills $3\frac{1}{2}$ ft. apart. 1 lb. 75c; 10 lb. lots at 60 cents.

ITALIAN RYE GRASS (*Lolium Italicum*)—This grass resembles English Rye Grass considerably, the most notable difference being that in most cases it is an annual, and of course will not last as long. It is very valuable, vigorous growing grass, suitable for furnishing in very short time a splendid green pasture. It forms a good turf, and stands the dry weather remarkably well. This grass can be sown with success either in the fall of the year or very early spring. On rich land it will grow from 2 to 3 feet high. From 40 to 60 pounds of seed should be used in seeding an acre.

WE ARE AGENTS FOR

FERTILIZERS

MANUFACTURED IN TAMPA, FLA. BY

The Gulf Fertilizer Company

They manufacture a special brand of Fertilizer for both young and bearing orange trees; also a complete line of vegetable fertilizers to suit each plant grown on Florida soil. They are importers and dealers in all kinds of Agricultural Chemicals, and will mix any formula on short notice, being equipped with latest machinery; daily capacity of 200 tons. We are agents and will give your orders personal attention.

BOOKLET AND PRICES FREE ON REQUEST

POULTRY SUPPLIES

Crushed Oyster Shell

If you are a poultry raiser you know the value of OYSTER SHELLS, especially when they are properly ground and free from dirt. There is no waste when you buy 100 lbs. of our "Reliance Brand." It's all shell.

75c. Per 100 Lbs.

Mica Crystal Grit

COARSE AND FINE.

A very necessary article in poultry raising, if you expect to be successful. Poultrymen of long experience pronounce "Mica Crystal Grit" superior to all others. It retains its grinding qualities longer, and this with the medicinal properties contained makes "Mica Crystal Grit" a valuable requisite to poultrymen.

\$1.25 Per 100 Lbs.

COARSE AND FINE GROUND BONE.

Consists of ground beef thoroughly dried and free from grease. It is more economical and better in every way than common raw beef bone. Rich in bone phosphate of lime, which is so necessary for making good egg shells and for building up the frame of the chicken. Should be placed in liberal quantities in clean, dry places accessible to the chickens at all times. Price, 5c. per lb.; 50 lb. sacks, \$1.75.

MEAT AND BONE.

It is a well balanced mixture of ground bone and meat meal. Admirably adapted for building up and fattening broilers. It encourages rapid growth and forces them for early market with profit. Should be mixed with their mash in moderate quantities. Care should be taken not to feed young chickens stale mash. Price, 5c. per lb.; 50 lb. sacks, \$1.75.

MEAT AND MEAL.

Made from cooked meat scraps thoroughly dried and ground. It is especially useful for fattening poultry for market. It is better and more economical than fresh beef scraps because it is concentrated and free from moisture. Price 5c. per lb.; 50 lb. sacks, \$1.75.

FINE GROUND DRIED BLOOD.

A highly concentrated and natural food for hens. Makes them lay more eggs—in fact, keeps them busy the year 'round. Makes the plumage bright and glossy, and is particularly beneficial during the moulting season. Should never be fed without mixing with other food in proportion of 1 to 15 of meal, shorts or Early Breakfast Mash. Price, 5c per lb.; 50 lb. sacks, \$2.25.

COARSE BEEF SCRAPS.

An absolute necessity if the best results are to be attained and especially at the season when bugs and worms are scarce. "BEEF SCRAPS" we offer analyze a much higher percentage of protein than many others, though we sell at 5c. per lb.; 50 lb. sacks, \$1.75.

GROUND CHARCOAL.

A necessary addition to your other supplies and should always be on hand. Price, 5c. lb.; 50 lb. sacks, \$1.75.

Crenshaw's Sorehead Salve

GUARANTEED TO CURE.

Sorehead is one of the most dreaded diseases among poultry in Florida. It has many times wiped out an entire flock in one week. The remedy we offer is the result of many experiments made by Frank S. Love, editor of the Florida P. & A. Journal, and has proven itself thoroughly reliable, often curing bad cases in two applications. It is harmless to feathers or flesh, but sure death to germs. It will also cure head lice and scaly leg. Directions on each box.

PRICE 25 CENTS, POST-PAID.

PIGEON FEED

A properly prepared feed for the pigeon fancier's use, that has proven itself entirely satisfactory. Nothing but sound, sweet grain used. Price, \$2.50 per 100 lbs. We carry a complete line of unmixed grain for pigeons, such as Buckwheat Kaffir Corn, Hemp, Pigeon Peas, Sunflower Seed, etc. Prices given on application.

ALFALFA MEAL

In tests made it has been shown that Alfalfa contains about 17 per cent protein, which is a very high percentage and makes a rich feed, giving grass conditions, thus promoting health, vigor and fertility of eggs. Price per 100 pounds, \$2.00.

Directions for Using.—Take one pound of Alfalfa Meal, steep in water (hot water preferred) and let it stand for one-half hour. Just before feeding dash a little cold water over the meal; this brings out the fresh, green color; add a handful of cracked corn, corn meal, bran or middlings and mix them thoroughly. Have it moist, but not sloppy. This is sufficient for ten hens one meal. Cost about 3 cents. Feed on a board or platter or in a V-shaped trough, the latter preferred.

POULTRY FEEDS

Scratch Feed

A properly prepared feed, composed of several varieties of choice grains and seeds, containing the necessary elements for egg production, and is in no sense a fattening feed. It is free when corn is used in the mixture; there is no waste whatever and it will keep your fowls in good, healthy condition, free from the ill-effects of too much corn. It is prepared by a practical poultry raiser of many years' experience in the South, and not built on theory, as many of the so-called chicken feeds are.

PRICE, \$2.25 FOR 100 POUNDS.

Chick Feed

A clean, wholesome mixture of the purest grains, with the idea in mind of producing a quick, healthy growth. Nothing but the best of grain used, and without either corn or grit, thus making one of the cheapest as well as the best feeds you can possibly buy for the chicks. Grit can be had for \$1.25 per hundred pounds, and many of the breeders in Florida have found that corn in chick feed has increased the mortality in little ones twenty per cent. Chick Feed is therefore the cheapest feed even at the same figure. Try a bag and convince yourself.

PRICE, \$2.50 FOR 100 POUNDS.

Morning Mash

Saves you the trouble of mixing your shorts and other ingredients for the mash. It is always ready for the water, made up from the best wheat bran, alfalfa meal, linseed meal and crushed oat hearts. It contains all the elements for large egg production, and will add vigor and strength to growing stock. Fine for use during moult.

PRICE, \$2.50 FOR 100 POUNDS.

Model Grinding Mill

An Improved Hand Power Grinding Mill of new and elegant design.

They are intended to grind all kinds of grain, dry bone, shells, roots, bark, salt, etc.

They are the best all-round Family Mill, producing cracked wheat, graham flour and corn meal for the family at the slightest cost, producing cracked or ground corn or other grain of any fineness necessary for feeding to the young chicks and the coarse for the grown fowls; all so easily controlled and adjusted, leaving nothing to be desired.

They are easily adjusted to grind fine or coarse without the use of wrench or other tools. The Burrs are made of Steel-Alloy Metal, the most durable grinding surfaces made.

Their capacity is about as follows, depending on the condition of the grain or fineness of the meal:

No. 1½, ½ to 1 bushel per hour.
No. 2, ¾ to 2½ bushels per hour.
No. 3, 1 to 3 bushels per hour.

List of Sizes, Weights and Prices.

No.	Height.	Width.	Wheel.	Weight.	Price.
1½	13	8¼	12½	20 lbs	\$2.50
2	16	9½	16½	35 lbs	5.00
3	18½	12¼	19¾	63 lbs	7.50

Packed one in a box. Weight No. 1½—28 lbs.; No. 2—50 lbs., and No. 3—85 lbs.

Warranty.

These Mills are warranted to grind more rapidly, and outlast any Mills of this class on the market.

"Black Hawk" Feed Mills

As shown by cut below is warranted to wear well and grind well

CORN, WHEAT, RYE OR OTHER SMALL GRAIN.

Long Crank will be found better than the hand wheels usually found on mills of this class. Such wheels add half to the weight and cost of the mill, and more than half for cost of freight and packing.

BLACK HAWK FEED MILL.

Easily taken apart for cleaning or repairing. Quickly adjusted for fine or coarse grinding. Grinding plates are made of hardest and strongest metal. All bearings are chilled. The long crank is of malleable iron.

All parts of "BLACK HAWK" mill are interchangeable and can be ordered by numbers cast on each piece.

Has both holes and slots for fastening to table, bench or other support.

Weight of Mill, 17 Pounds.

RETAIL PRICE, \$3.00.

EXTRA GRINDERS, 40c. PER PAIR.

MANDY LEE INCUBATORS

To all of our friends who are poultry-raisers—and most of you are—we offer the same high-grade of goods that has made possible the splendid business in other lines we now enjoy.

The name "Lee" on an Incubator or Brooder means the **best**—the very latest improvements—the result of a quarter century's work by one of America's most scientific and successful poultrymen. His goods and methods are tested not only on his own model poultry farm, but in other localities and different sections of the country. Every feature—every improvement—is a **proven** success before you have an opportunity to buy it.

"LEE" machines are different in every essential feature from others. **First**—He conceived the idea of regulating moisture with the same degree of accuracy as heat. He invented the Mandy Lee Hygrometer. Last year that instrument was copied by most other manufacturers (as closely as they could without infringing on his patent) which is the best testimonial as to its value.

This year he has perfected a new system of ventilation, not above or below the eggs, (as in other machines) but right at the eggs—clear through the machine—an improvement that insures fresh air for the eggs all the time.

The Correct Way to Ventilate

is neither above nor below but at the eggs. We found it—have it in use. Other incubators will be copying our plan next year just as they have tried to copy our Hygrometer. But this year the only way you can get absolutely perfect ventilation and free oxygen supply is with a

MANDY LEE INCUBATOR

Look at the picture at the top. It is the Mandy Lee door. Six openings right into the egg chamber, covered only with fine mesh wire gauze and cloth. This means free circulation of air at all times, and no drafts. Carbonic-acid gas passes out and the life-giving oxygen passes in. This is the boldest and most important step ever taken in incubator building. And we have the proof that it is right. It is the long sought "turn" that places *one* incubator—*The Mandy Lee Incubator*—above all others and above the hen as a hatcher. *We want to send the proof to you.* We measure and control *everything*—heat, ventilation and moisture. No other incubator regulates anything but *heat*. If you follow simple directions, you *can't* fail with a Mandy Lee. New catalog explains everything fully; also tells about our new outdoor lamp-heated and regulated brooder—just what you want. Write today for catalog and full information, and for "Lee's Chicken Talk" or "Mandy's Poultry School"—all free.

The heater, drop bottom, perforated tube system of heat distribution, and other features about this Incubator are equally valuable and fully explained in catalogue which we will gladly mail on application.

GEO. H. LEE CO.,

Harney Street, Omaha, Neb.

MANDY LEE DIRECT CONTACT HEAT BROODERS

Indoor Lamp Heated

One of the new things that is prominent in the LEE line of machines this year is an out-door lamp-heated and regulated Brooder that is at once a Brooder, Colony House and poultry house combined—something that ought to be especially valuable to the poultrymen in this section.

FIRELESS

It pays to get in touch with LEE and his methods; to profit by his progressiveness. Next season his competitors will be compelled to copy features that he is showing this year on his machines for the reason that no Incubator operator will consider a machine at all without those advantages.

Therefore, those who use a Mandy Lee now will have at least a year's start on those who take hold of it next year.

Outdoor Lamp Heated

We are featuring Mandy Lee Incubators and Brooders this season—selling and guaranteeing them to our trade—because we honestly believe they are better than any other—the best hatching and breeding equipment that can be had at any price. If you are interested and expect to buy any kind of an Incubator or Brooder, we say to you “Buy the Mandy Lee.” They won't cost any more than any other reliable machine and they will give infinitely better results. It is sheer nonsense for you to buy a half-finished article when you can just as well get one that is complete. Write us for catalog and full directions now.

Conkey's Stock Remedies

Like the Poultry Remedies, Conkey's Stock Remedies are sold under a guarantee of satisfaction or money cheerfully refunded

THIS line of remedies represents the very choicest prescriptions of a noted veterinarian, who has used them in a successful private practice for many years. We are glad to handle them and recommend them as the best stock remedies that have ever been offered for sale. The guarantee is your protection—the remedies must please you or you can have your money back without quibble.

Conkey's Stock Vigor

The best condition powder on the market for horses, dairy cows, cattle, sheep and hogs. It promotes good health by aiding digestion, increasing the appetite and by toning up the whole system quickly and effectively. Excellent for ridding an animal of worms if used steadily. If your stock is worn out and jaded and not in proper condition give the article a trial to put them in best possible shape. It does not contain one ounce of filler. You pay for nothing but medicine. 25c, 50c and \$1.00 packages, pail \$3.50. Express extra.

Conkey's Healing Powder

The wonderful gall remedy. The most perfect healing agency for all sores and wounds known to medical and veterinary science. It is an astringent, antiseptic and germicide and very simple to apply. Price 50c postpaid.

Conkey's Worm Remedy

It gets all the worms, including the hurtful ulcerating worms and their larvae. Works every time and enables the animal to thrive and enjoy the benefit of his food. Price 50c, postpaid.

Conkey's Hoof Remedy

An economical preservative of the hoof that keeps it in perfect condition. Prices—1 pint, 50c; 1 quart, 75c; ½-gallon, \$1.25; 1 gallon, \$2.00; 5 gallons, \$9.50.

Conkey's Dip and Disinfectant

The best Sheep Dip made and a reasonable-priced, dependable disinfectant. Good for universal use. Prices—½-gallon, 75c; 1 gallon, \$1.25; 5 gallons, \$5.00; 10 gallons, \$9.00.

Conkey's Poll Evil Remedy

Humane, effective, and does not unfit the horse for future usefulness. Price \$2.00.

Conkey's Horse Tonic

Quickly puts new life and spirit into

run-down, jaded, overworked, worn-out horses. Price \$2.00.

Conkey's Fly Knocker

It kills every fly it hits and stops others from annoying your cows or horses. It rids your stock of the pests and promotes their comfort, health and usefulness. Positively harmless and will not taint the milk, of greatest value to dairy-men, horsemen, horseshoers, etc. The best article on the market today and absolutely guaranteed to satisfy you or money cheerfully refunded. Give it a trial and it will save you money. One ounce sufficient to spray two animals. Prices—1 quart, 35c; 2 quarts, 60c; 1 gallon, \$1.00.

Conkey's Fever Remedy

For all diseases having fever or chills as a symptom. Influenza, Button Farcy, Strangles or Distemper, Epizootic, Pink Eye and Shipping Fever. Price \$1.00.

Conkey's Absorbent

For Spavins, Ringbones, Splints and all unnatural bone formations. Price \$1.00.

Conkey's Pain Lotion

For inflammation, swellings, etc. Does not injure the mucous membrane. Best Eye Lotion made. Price 50c.

Conkey's Colic Remedy

No drench, no nuisance. A few drops on back of tongue all that's necessary. Price 50c.

Conkey's Heave Remedy

A wonderful remedy. Combines good sense and good medicine. Price \$1.00.

Conkey's Nox-i-cide

The greatest disinfectant and germ destroyer known and invaluable to the poultryman or stockman.

It kills the germs which are responsible for most diseases, cleans and purifies, removes odors, prevents flies from breeding, promotes the health and comfort of your fowls and animals. Mixed with water, 1 gallon Nox-i-cide makes 101 gallons good disinfectant. Good for scores of uses around the poultry yard, barn and household. Send for special booklet on Nox-i-cide, 40 pages, illustrated. Prices—Pint, 35c; quarts, 60c; ½-gallon, 90c; gallon, \$1.50 Express extra.

Conkey's Poultry Remedies

We handle a complete line of these celebrated remedies which have built their reputation upon the scientific basis of one remedy for each disease

A "CURE ALL" is not made by the Conkey Company. Each remedy is intended to serve one special purpose and serve it well. These goods are absolutely guaranteed and we offer them to you on this basis: If they fail to satisfy you in any particular, your money will be refunded to you cheerfully. Limited space will not permit descriptions of each of these remarkable remedies, but we will mention a few briefly and list the rest. Fuller information will be supplied on request.

Conkey's Roup Remedy

This is the best known remedy for Roup. Every civilized country of the world knows and uses it as the one reliable means of curing Roup, when given in anything like reasonable time. It is a cure, a tonic and a preventive. You should have it on hand to use at the first signs of the trouble, though it generally cures even in advanced stages of the disease. It kills the germ, purifies the blood and tones up the general health of your flock. Nothing made that is so dependable and promptly effective. The ravages of Roup often amount to an epidemic and Conkey's Roup Remedy will often check the disease before it has a chance to attack other fowls. Price 50c and \$1.00 postpaid.

fies the blood and tones up the general health of your flock. Nothing made that is so dependable and promptly effective. The ravages of Roup often amount to an epidemic and Conkey's Roup Remedy will often check the disease before it has a chance to attack other fowls. Price 50c and \$1.00 postpaid.

Conkey's Lice Powder

The strongest and most effective Lice Powder for body lice ever made. It doesn't scare, stun or drive the lice away—it kills them on the spot. Lice simply cannot live where Conkey's Lice Powder is properly used. Try it today and free your fowls from these parasites. Liberal samples for 4c in stamps. Prices—5 oz. package, 10c or 15c postpaid; 15 oz., 25c or 40c postpaid; 48 oz., 60c, express extra.

Conkey's Lice Liquid :

A powerful liquid that will destroy the thousands of red mites that live in the cracks and crevices of the house and nests in the day and swarm the fowls' bodies at night. You can't reach them with a powder. Conkey's Lice Liquid is the preparation that will immediately and entirely rid your poultry house of the blood suckers and profit killers. 1 quart 35c, 2 quarts 60c, 1 gallon \$1.00; express extra.

Conkey's Head Lice Ointment

Save your little chicks from the ravages of the deadly head lice. Conkey's Head Lice Ointment

Conkey's Big 72 Page Poultry Book FREE

This is a book that every poultry raiser should have and no poultryman who has ever had a copy would be willing to give it up at any price. Highly endorsed by the expert and thoroughly appreciated by the amateur. It is practical, helpful, concise and complete. In plain, common sense terms it treats the whole subject from the profit making angle. It deals with the important questions of housing, bedding, feeding, incubation, diseases, in a sensible, practical manner that will save your money and insure success if you follow its simple instructions. The 72-page 1910 edition regularly sells for 50c, but it's yours free, for 4c in stamps to cover postage.

is instant death to the head lice, absolutely harmless to the little chicks. Easy to apply. 10c and 25c, postpaid.

Conkey's Laying Tonic

This actually makes hens lay without harming them. It is not a food in itself, and you escape paying for bran and middlings, which comprise the bulk of inferior egg-producers, and which you can supply for less money from your own bins. There is not one particle of filler in this tonic. It means vigor in your fowls, which is the greatest egg-producer known. 1 1/2 lbs., 25c; 3 1/4 lbs., 50c; 7 lbs., \$1.00; 25 lbs., paid \$3.00. Expressage extra.

Conkey's White Diarrhoea Remedy, 50c postpaid.
Conkey's Bronchitis Remedy, 50c postpaid.
Conkey's Cholera Remedy, 25c and 50c postpaid.
Conkey's Gape Remedy, 50c or 60c postpaid.
Conkey's Chicken Pox Remedy (for Sore Head), 50c or 55c postpaid.

Conkey's Limber Neck Remedy, 50c or 55c postpaid.

Conkey's Scaly Leg Remedy, 50c or 55c postpaid.
Conkey's Rheumatic Remedy, 50c or 55c postpaid.
Conkey's Healing Salve, 25c postpaid
Conkey's Poultry Laxative, 25c postpaid.
Conkey's Flea Salve (for Southern Sticktight), 25c or 30c postpaid.

Conkey's Sulphur Candles, 10c each, 3 for 25c; \$1.00 per dozen. 5c each for postage or express extra.

POULTRY SPECIALTIES

The Champion Chicken Marker

Many times persons wish to mark their young chicks with a permanent mark that they may identify them when grown. This can be done by punching a small hole in the web, between the toes. This can be done when the chicks are taken from the nest. The hole will remain during the life of the fowl. In this way records of matings may be kept. It will also serve to identify your birds in the event they are stolen. Sixteen different marks can be made by making hole between different toes.

The Champion Marker is especially designed for this purpose. Made in two sizes, large for old fowls, small for chicks. Price, postpaid, 25c.

Sanitary Drinking Fountains

The cleanest, most up-to-date Chicken Fountain now in use. Keeps the water always fresh, clean and cool. Two gal. 75c.; 1 gal. 50c.; 1/2 gal. 35c.

Davis Food and Water Fountain

The neatest and best fountain on the market, and the only fountain that can be satisfactorily used for either water or grit, oyster shells, etc. Can be used with any size bottle or with pint, quart or two-quart glass jar. A large bottle is best for water, and a fruit jar for feeding grit, shell, etc.

PRICE 25 CENTS EACH.

Leg Bands for Poultry

12 for 15c.; 25 for 30c.; 50 for 50c.; 100 for 80c., postpaid.

The IMPROVED CHAMPION, made of aluminum and adjustable to any size fowl.

Held by double lock; they can't slip off.

Porcelain Nest Eggs

Very best gradeper dozen, 25 cents

Incubator and Brooder Sundries

With each Incubator we furnish free an Egg Tester, Thermometer, Level, Lamp, Burner and Wick. With each Brooder is supplied a Thermometer, Drinking Fount, Lamp and a package of Germozone.

INSECTICIDES

ALPHA BRAND TOBACCO AND WHALE OIL SOAP.—Very effective for scale, green and black fly, mealy bug and red spider in greenhouses; also for hen lice and dog fleas. 25c. per bar.

Directions.—For spraying plants dissolve one-third of soap in 1 gallon of water. Stir well. Apply with syringe, pump or brush. For washing palms, apply with wet sponge. For exterminating hen lice dissolve one-third of the bar of soap in 1 gallon of water, stir well and apply with sprayer or whisk broom to interior of hennery; in nests shave small slices and apply under hay. For dog fleas, wash dog with strong lather, permitting it to dry naturally.

HAMMOND'S SLUG SHOT.—An excellent article for destroying cabbage fleas, green lice, turnip and beet fly, potato bug, grub worm, etc. It is ready for use and only requires to be dusted onto the plants while they are wet with the dew in the morning, or when applied in the evening plants should be watered over the leaves half an hour before the Slug Shot is applied. Five-pound packages, 10c.; in bulk, \$7.00 per 100 lbs.. Single pound, 10c.

RAFFIA NATURAL—*First Grade.* Per small bunch, 10c.; per half pound, 20c.; per 1 lb. 30c. In original skeins of 1½ to 3 pounds at 25c. per pound; 5 lb. lots or more, at 20c. a pound.

SANITARY Drinking Fountains

The cleanest, most up-to-date chicken fountain now in use. Keeps the water always fresh, clean and cool.

POULTRY SUPPLIES WE HAVE THE LARGEST AND MOST COMPLETE STOCK OF
THIS KIND IN THE STATE.
WE HAVE THE "MANDY" LEE INCUBATORS AND BROODERS THE BEST
WRITE FOR BOOKLETS

SPECIAL NOTICE We shall esteem it a great favor if you will give us the NAMES and ADDRESSES of any friends who would like to have our catalog. Extra Order Sheets mailed upon application.

DIRECTIONS HOW TO ORDER AND REMIT

Write your name, Postoffice, County and State on every order or letter sent to us; send cash with order. Observe cost of postage and include with your remittance. Remit by express or postoffice money order, check or registered letter. We accept clean postage stamps. **NOTE—HAVE ALL REMITTANCES DRAWN PLAINLY, CRENSHAW BROTHERS SEED CO.** It is not necessary to register stamps.

SHIPPING.

We can mail packages of seed weighing up to four pounds. The rate is 8 cents per pound. The express rate is not any more. If yours is an express office notify us, and we will use that mode of transportation. Heavier shipments by express or freight, as you direct. Parties ordering shipments by express or freight collect are expected to take them out promptly when they arrive at their destination. This should be thoroughly understood when ordering. Unless we have had previous dealings with you, we require one-third of the amount in advance when shipping C. O. D.

SEEDS BY EXPRESS.

By special agreement with the express company, seeds and plants will be carried for 20 per cent less than usual merchandise rates, when charges are prepaid.

SEEDS IN PAPERS BY MAIL, POST PAID.

We pay postage on all packets, ounce and one-fourth pounds. For one-half pounds, add 5 cents; one pound, 10 cents; for half pints peas and beans, add 5 cents; for one pint add 10 cents; for one quart add 15 cents for postage.

CRENSHAW BROTHERS SEED CO. give no warranty, either express or implied. While we exercise every effort to produce the best and most reliable seeds, and such as are fresh and genuine, we will not in any way be responsible for the crops. Our guarantee does not extend beyond our honest efforts and intentions. If the purchaser does not accept the goods on these terms, they must be returned at once. All seeds are tested for germination before sending them out.

Conditions prevail at all times when, from causes unknown, the very purest and best of seeds fail to come up. This is no fault of the seed, but is often attributed to it. Climatic conditions existing in some sections of the country are very much against the germination of the seed at certain seasons.

SEEDS FOR MARKET GARDENERS.

We are in a position to give market or truck gardeners or public institutions buying in large quantities, as low prices as those of any reputable seed house. Our seeds are the very best to be obtained, true to name and variety, and are all tested. We invite inquiry and will give prices to those who write us. In writing, kindly mention variety, with amount of each article desired.

We will gladly mail your friends our catalogue if you will give name and postoffice when ordering.

Extra order sheets and envelopes will be mailed free to customers requesting them.

Seed Potatoes

We make a specialty of supplying a guaranteed Aristook
County, Maine, grown seed potatoes—the only
